DESCRIBE THE P	RESENT AND OF	IGINAL (if know	WD) PHYSIC	AL APPEARANCE		

The Kidder Covered Bridge consists of a single span supported by two flanking timber queenpost through trusses. Iron suspension rods augment the vertical timbers in the trusses. Timbers, joined longitudinally by steel plates, have been added to the bridge under the trusses. The bridge has the form of a parallelogram, with a skew of 15 degrees from the perpendicular between the flanking trusses. The abutments which support the ends of the bridge are constructed of stone slabs faced with concrete. The bridge is 66 feet long and 15 feet wide, with a 12-foot roadway.

On the exterior, the heavy timbers which form the queenpost trusses of the bridge are sheathed with flush boards hung vertically. Similar siding protects the ends of the trusses immediately inside the portals. There are no windows or openings in the siding. The gable ends are flat and sheathed with vertical flush boards. The roof of the bridge is covered with corrugated metal sheeting.
