National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

National Register of Historic Places Continuation Sheet

DRY MILLS SCHOOL		CUMBERLAND, MAINE
Section number7	Page	

The Dry Mills School is a one-story, frame, Greek Revival style building which stands on a granite block foundation and has a gable front roof. It is sheathed entirely in weatherboards. The school occupies a site off the State Game Farm Road that is approximately 1.5 miles away from its original location along Route 26. Relocation took place in 1990 when the school was threatened with demolition on the former site.

Facing south, the building's front elevation features a single centrally located six-panel door that is surmounted by a projecting hood. A second opening in the gable peak is concealed by a door comprised of vertically placed tongue and groove boards. A flag pole is mounted above this door. Paneled corner pilasters of medium width rise to a frieze board and short gable end returns that in turn meet the raking cornice. An interior stove flue punctuates the roof at the north end.

Both the east and west side elevations contain four symmetrically placed six-over-six double hung sash windows. The frieze/cornice continues along the sidewalls where it meets pilasters at the northeast and northwest corners. In contrast to the primary and secondary elevations, the rear elevation lacks architectural ornamentation, and has no door or window openings.

In plan, the building has a vestibule at the south end to one side of which is an open room that is said to have served as the storeroom for firewood, and on the other side is a "recitation room". A horizontal board partition separates these spaces from the main classroom which occupies the balance of the interior. The classroom side of the partition contains four slate chalkboards that are located above horizontal board wainscot (which extends around the room). A stove and long stove pipe are located at the north end wall of the classroom.

DRY MILLS SCHOOL

CUMBERLAND, MAINE

Section number 8 Page 2

Constructed about 1857 and used in its original capacity for 102 years, the Dry Mills School is a well maintained example of a mid nineteenth century rural one-room schoolhouse. The one-story, gable roofed frame building exhibits modest Greek Revival style detailing. It is the last example of a one-room school in the Town of Gray that has not been significantly modified for other purposes. Threatened by its proximity to Route 26, the former school was moved to its present location in 1990 where it was subsequently rehabilitated by the Dry Mills School Committee. The building is eligible for nomination to the National Register of Historic Places under Criterion C for its architectural significance. Criteria Consideration B applies to this property because it has been moved.

First settled by Anglo-Americans during the second quarter of the eighteenth century, the Town of Gray was incorporated on June 19, 1778. By the taking of the census in 1850, the town's population stood at 1,788 persons, a figure that was to decrease over the next three decades, rebound in 1880, and then rapidly decline thereafter. In the 1858 *History and Description of New England*, farming was listed as the principal business in the town, and there were two factories, two sawmills, and a new steam mill.

Gray's educational history follows the pattern repeated throughout rural Maine. According to early records the town's first two school districts were formed about 1780, although the first schoolhouse was not erected until 1793. A year later, the town was divided into four school districts, a process that was repeated as the need arose until there were a total of twelve districts, each of which had its own building. The Dry Mills School was located in District No. 3. In addition to the several district schools, which typically provided instruction at the primary and grammar levels, the Town of Gray appropriated funds for high school education beginning in the early 1800s. Although it is not clear where classes were originally held, after the construction of a two-story brick schoolhouse in 1843 in Gray village, the high school was held in the upper level of this building. In 1876, wealthy local resident Henry Pennell announced that he would give the town a new high school facility which, upon its completion in 1886, was named Pennell Institute (NR 7/12/82).

School consilidation beginning in the early twentieth century doomed Gray's one-room schoolhouses to functional obsolescense, and the Dry Mills School was finally closed in 1959. During the 1970s the interior of the building was renovated for use as a preschool. By the late 1980s interest grew in preserving the school as a museum. This plan included the relocation of the building in 1990 to a more protected site than its original one along heavily traveled Route 26. Restoration of the school has been recently completed.

National Register of Historic Places Continuation Sheet

DRY MILLS SCHOOL

CUMBERLAND, MAINE

Section number ___8 Page __3___

The one-room schoolhouse was a familiar object in the rural landscape of nineteenth and early twentieth century Maine. This was the result of a traditional educational system in which towns subdivided themselves into school districts, each of which contained a schoolhouse to serve its particular locale. Although the district school system became a target for nineteenth century school reformers, its widescale use resulted in the erection of a vast number and variety of buildings; a figure which at the turn-of-the-century totaled more than 4,000. Twentieth century school consolidation efforts have taken a dramatic toll on the number of these buildings which survive. In 1960, for example, it was reported that only 226 schools in Maine were being held in one-room buildings, a figure which has since dropped to a mere handful (*Report of the State Board of Education*). In Gray, the Dry Mills School is the sole remaining example of the building type that has not been converted into a residence or other use.

Typically constructed of wood with gable roofs, Maine's one-room school buildings were usually given only modest architectural adornments with the result that the schoolhouse of 1900 may have looked very much like one that is several decades older. There appears to have been a common formula for the design of these buildings which embodied widely disseminated ideas about minimum space requirements, proper ventilation and heating, site orientation, and window placement. As early as the mid nineteenth century reformers were suggesting that two entrances were desirable as a way to prevent "much confusion and rudeness" and to promote "orderly habits" (1847 *Board of Education Report*). This feature was not, however, universally used on Maine schools, as is evident in the Dry Mills School. The provision of proper lighting was also central to the issues of schoolhouse design, and by the early twentieth century a common solution to this problem was to incorporate a bank of windows along one side elevation. This modification was made to many earlier buildings, but was not carried out on the Dry Mills School.
