DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

Trinity Episcopal Church is of frame construction and uses the vertical board and batten construction technique. It is of the Gothic Revival style, of the type commonly known as carpenter, cottage, or pseudo-perpendicular. Trefoil ornamentation in relief appears on the facade, and three lancet arch windows pierce the wall over the front door. There are also four lancet arch windows along the sides of the church, indicating the bays. windows echo the bays, and the battens terminate in a practice Five dormer repetition of the lancet points under the eaves. A dentil course is used in place of vergeboard trim. The face of the narthex repeats the facade design on a smaller scale. A projection, a sort of an open bellcote or a semi-flèche substitutes for a steeple. It is also pierced by a lancet arch and the dentillation repeats the narthex and facade trim. A recessed trefoil cusp is used here in place of the relief trefoil ornamentation on the rest of the building. The bellcote supports a large botonee cross. Transepts bisect the cruciform-shaped building between the first and third bays on the narthex end. Relief trefoil ornaments and dentillation repeat the design of the facade, narthex and bellcote. The two side windows in each transept are lancet arched, but an elliptical arch is used to fill in the area on the outward ends. The first four bays of the building are the nave, the fifth is the choir, while a projection to the north furnishes the space for the chancel and a stained glass window with a lancet arch pierces the non-apse north gable of the south-to-north axis church. A Parish Hall was added in an L extending west from the north end of the church. This joined the 1878 Rectory which sat on the block just to the west of the church. However, in 1971 the old Rectory was removed and an addition made to the Parish Hall. The pattern now is a quadrangle and the west side of the church may only be seen from the small courtyard in the middle of the quadrangle. The south wing of this addition extends across the facade of the church at the lower level, but it has been constructed in a style sympathetic to the original, and the Gothic details have been repeated, not obscured. The trefoil motif is found repeatedly in both the old and the new portions of the total complex, in various forms, and is fitting to a parish church dedicated to the Trinity. Other than the quadrangle addition and the extension across the lower level of the facade, the exterior of the building is in or near to its original condition. Only the east wing, the original section, is being nominated.

Episcopal denomination, a group that has been connected with both Iowa City, and with the University of Iowa, since the inception of each entity. Three University Presidents have been parishioners here, and one Rector of Trinity Parish also served as President of the University. That was Silas Totten, 1859-1862. The building and the congregation which it houses are an integral part of the social fabric of the community, and the building is a visual example of the 19th century heritage of the town.

7. Description

Trinity Episcopal Church, Iowa City, Iowa

Description of the Interior

The interior of Trinity Episcopal Church continues the Gothic Revival style of the exterior in motif. And, as in the case of the exterior, is substantially unaltered since its contruction in 1871. The only changes are the new wood work in front of the choir pews, replacement of portions of the Altar rail, and carpeting on the floor. The rest of the interior is, in appearance and structurally, as it was when first dedicated.

The main roof of the nave is steeply pitched, pierced by clerestory windows, and supported by six heavy beams whose butts divide the side walls between each lancet arch window. All windows are stained glass. An elaborately carved, dark-wood reredos stands in front of the large, traceried, stained-glass apse window behind the Altar. Dark-wood pews are arranged in the nave in the traditional center aisle and side aisle pattern of Gothic Churches. The interior walls are plastered and painted Alcoves on each side of the nave at the second bay a light cream. contain small chapel altars, and the choir is flanked by the organ on the right wall and its pipes directly across on the left wall, behind the choir pews. The lancet arch design is repeated in the curve of the beams and in the opening to the sanctuary. The Bishop's Chair sits to the left of Trefoil and quatrefoil carvings decorate the woodwork the Altar. throughout the interior, and all of the woodwork is a uniform dark brown.
