DESCRIBE THE PE	RESENT AND OR	IGINAL (if kno	own) PHYSICA	L APPEARANCE		<del></del>

The State Arsenal was completed in 1839 from the designs of Russell Warren for the First Regiment of Light Infantry (Providence Journal, March 15, 1839); its cost was \$ 3,000. It is a gabled structure of eighty by forty feet, constructed of chipped stone (flint) or rubble, covered by cement (which apparently at one time was a smoother coat than now and was ECENET ashlar). It is of two-storey height above a basement set into a steepty sloping hillside site--the site conditions being him. and after the building was moved. This basement does not show when only REGISTER the building's (east) entrance elevation on Benefit Street is viewed ? This façade, rising directly from the sidewalk, has a gabled centre section tion, which originally had battlements on the slopes of the gable, with a atwo-storey portal, slightly recessed, of pointed Gothic form. Only the lower portion of this heavily panelled and iron-studded portal, which is divided in two by a horizontal transom, contains workable doors. Flanking the centre section are two square, battlemented towers pushed out from the front corners of the building; these towers have narrow slit-windows at three levels. The main body of the building runs back towards the west for a length of five bays and is very plain. Its tall windows are diamond-paned and are protected externally by strong, black-painted iron shutters.

Within, the main floor is given over entirely to the large drill-hall except for a small vestibule inside the portal, a very shallow hall-way, the stairs in the towers, a small janitor's office and a lavatory. Three Tudor arches of good width and height occupy the main spaces of the drill-hall's east end: one contains the principal door into that hall; the other two accommodate auxiliary folding doors below and projecting balconies at stair-landing-level above. The second floor is divided into two large and one small rooms, a coat-room and another lavatory. Space in the basement is taken by a museum room, a large storage room, kitchen, heater and lavatory areas.

Woodwork throughout the building is generally of dark-stained, simply panelled wainscot form, with some trim employing pointed arches and some panelling done in the linenfold design. The drill-hall's ceiling has exposed beams forming narrow compartments (supposedly supported by curved brackets around the four sides), and here the wood has been painted. The transverse beams have been given a slight concavity, or minimally arched effect, on their lower sides, and there are turned wooden pendants where major beams intersect—altogether the simplest of Gothic Revival decorative treatment.

The building was in 1906 moved a very short distance north to the corner of Benefit and Meeting Streets, when it became imperative to put a railroad tunnel under its original site. It has been excellently maintained both inside and out, its utility equipment etc. kept up to date. It is in frequent, thought not constant, use.

The State Arsenal is in its locale a small but important example of early battlemented Gothic Revival architecture, a pseudo-fortress appropriate to its internal militia activities. It is one of the few excursions into the Gothic manner by Russell Warren, a Rhode Island native who was one of the outstanding architects in this and other states during the full first half of the XIX Century. The arsenal is an important part of our architectural legacy, an important property of the state and also an important component of the College Hill Historic District, already a major listing, en bloc, in the National Register.

It was erected for the First Light Infantry, but that corps found itself eventually unable to complete payment for the building it had had constructed. The building was then, in the 1850's, taken over by the state, which leased back the property for a 1,000-year period at an annual rate of six-and-one quarter cents. During the Dorr Rebellion in Rhode Island, in 1842, state ammunition and state troops were housed in the arsenal along with the Marine Corps of Artillery and the Kentish Guards of East Greenwich, who had been called up to help protect the building.

When--later in the mid-XIX-Century--the infantry unit left to occupy larger quarters, the lease was taken by the Marine Corps of Artillery, and they have been there ever since. This latter volunteer military body was chartered in 1801 by the Providence Marine Society, an association of merchants and ship-owners, and was the first militia battalion of light artillery in the United States. It has been the parent body of all artillery sent in all wars from the Civil War through World War II. The corps has until the recent past used the building for drill and training, for many social events; it is officially seated there; it preserves its records, relics and portraits, its Barker Artillery Museum of World War II (named for one of its many members outstanding in wartime accomplishment) in the arsenal.

## 8. Significance.

The building is opened occasionally for the meetings or entertainments of various historical and social groups and for special touring groups; and the drill-hall provides a good ballroom floor for a weekly dancing class. At present there are are thoughts and negotiations regarding future use of the arsehal as office headquarters for a distinguished group of military scholars, historians and collectors. This organisation, utilising those spaces hot retained by the Marine Corps of Artillery, could contribute substantially to the building's upkeep and its necessary architectural preservation—at the same time giving it more use and supervision than it now enjoys and making it more available for visitation.
