The Baltimore and Ohio Railroad Station at Ellicott City, erected in 1830-31, is the oldest railroad station in the United States. It served as the original terminus of the railroad's original 13-miles section of track. Over this line, in August, 1830, the locamotive Tom Thumb raced a horse drawn car and lost, because of mechanical failure. The Baltimore and Ohio Railroad was the first rialroad to be chartered as a common carrier of both freight and passengers and its supporters, moreover, looked beyond purely local needs to envisage a line all the way to the Ohio River that would channel the growing western trade through the port of Baltimore. This new form of transportation, it was hoped, would serve to counter the dominance of New York City as the nations major part and financial center after the completion of The Erie Canal. The financial success of this first portion of track gave impetus to further westward development of the Baltimore and Ohio Railroad as well as the construction of other American railroads that were just getting underway.

HISTORY

The railroad, like the turnpike and the canal, was first built to attach large tributary areas to the Atlantic seabord ports. The rivalry of these coastal cities resulted in a intense competition to reach the agricultural regions of the West by the rapid construction of eastwest transportation routes. The great railroad construction race that was about to begin in 1830 was precipitated by the economic overlordship bestowed upon New York City by the Erie Canal. Outdistanced rival ports had generally reacted with the construction of their own canals, but the topographical features in these other areas could not duplicate those that so greatly favored the Erie canal. Coastal cities were thus stimulated to seek some new device that would equalize the race for inland markets.

Baltimore, left by the wayside in the 1828 plans for the development of the Chesapeake and Ohio Canal, countered with a scheme of her own, the Baltimore and Ohio Railroad Company. City merchants incorporated the railroad company on February 28, 1827 and by April 1828, surveys for the proposed first 13 mile section had been completed. Between Baltimore and Ellicott City, the railroad was to follow the Patapsco

River because of the easy grades.

On July 4, 1828, the same date that the Chesapeake and Ohio Canal Company also began construction, Maryland's leading citizen, Charles Carroll of Carrollton, turned the first shovel of earth for the railroad; the race westward between the two rival forms of transportation was on. Construction of the roadbed, however, proved to be more costly and difficult than the company had anticipated, and expenses averaged about 17,00 dollars per mile. Two large viaducts had to be erected--The Carrollton Viaduct over Gwyns Falls, which still stands, and the Patterson Viaduct over the Patapsco River, the ruins of which can be seen at Ellicott City. Accidents and frequent riots among the poorly-paid laborers further slowed the pace of construction. But by October 1829 the workers began to lay the important English rails and by the following spring the single track ran to Ellicott City.

The Baltimore and Ohio proudly announced the inauguration of regular rail service to Ellicott City on May 24, 1830. Three trips a day would be made and the round trip of 26 miles would cost 75 cents. The <u>Pioneer</u>, the lead car of four individually horse drawn cars forming the the initial train, led the first train to Ellicott City, thus initialing the beginning of rail service in the United States. The first one-andone-half hour trip achieved instant popularity, and during the first 30 days the company earned \$1,000 a week.

In August 1930, the locomotive, Tom Thumb raced a horse drawn car down a parallel second track. Though the engine lost the first race because of mechanical failure, by July 1831 the Tom Thumb was operating regularly on the road at a rate of 18 to 20 miles per hour for those who wished to travel by steam.

The success of the first 13 miles of track undoubtedly spurred the further western development of the Baltimore and Ohio Railroad. Late in 1834, its tracks reached Harper's Ferry. By 1842 the railroad had reached Cumberland, eight years ahead of the Chesapeake and Ohio Canal, and in 1852 the Baltimore and Ohio finally crossed the Appalachian Mountains and entered Wheeling on the Ohio River.

*Statement of Significance taken from the Special Report "Baltimore and Ohio Railroad Station, Ellicott City, Maryland" by Charles W. Snell Landmark Files, Historic Sites Survey, National Park Service.
