8. Statement of Significance

Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.) N/A

- A owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or a grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance (Enter categories from instructions)

Section 7 Page 3 Hollywood Historic District
Jefferson, Alabama

Narrative Description

The Hollywood Historic District contains approximately 825 acres including some 800 acres of residential resources. The remainder includes the Union Hill Cemetery (Inv. # 542), American Legion Post #129, c. 1925(Inv. #1), Masonic Lodge, c. 1945 (Inv. #2), and c. 1928 Shades Cahaba Elementary School (#Inv. 3). Of the 548 resources, 413 (75%) are Contributing, and 135(25%) are Non-contributing. The District is bounded on the west by Montgomery Highway 31; on the east by Highway 280I; on the north by the Red Mountain Expressway; and on the south, the district includes parts of Yorkshire Drive and is drawn where the concentration of pre-1952 structures ends.

The predominant styles are English Tudor Revival (218), Minimal Traditional (151), historic Ranch styles (73), and Spanish Mission or Spanish Eclectic Style (57). In addition, there are Colonial Revival (15), Craftsman Bungalow (2), Commercial Style (1), Center Hall, and International Styles represented in the District. The Spanish style houses are among the oldest structures and are almost exclusively concentrated along Hollywood Boulevard, La Jeune, Gran, Bonita Drive, Poinciana Drive, La Prado Place, the latter three streets designated for that style. Tudor Revival styles are scattered throughout the District, but the greatest concentrations are on Poinciana Drive, La Prado Place, and Malaga Avenue south of Hollywood Boulevard; La Prado Circle; and English Circle. C. 1940s-50s Minimal Traditional and historic Ranch styles are also scattered throughout the District. Center Hall (Inv. #s535, 537) and Craftsman Bungalow (Inv. #533, the only well-articulated example in the district) styles are exclusively in the Greenwood Street area, also the last section of the District to be laid out for inclusion in the Hollywood neighborhood. There are 15 examples of Colonial Revival structures all but three of which were built during the 1930s and 40s and all located along Devon, Windsor, Hampton, and Yorkshire Drives. There is also one International style structure (Inv. #81). In addition, there are eighty-one original, c. 1925-1952, garages and twenty-three two-story carriage houses none of which are counted separately as individual resources.

Two hundred and thirty-seven structures were constructed between c.1925-29, and 141 were built between c.1930-39; the remaining 72 Contributing residential properties were built between c.1950-51. The 135 Non-contributing resources do not contribute primarily because they are less than fifty years old; most of these are c. 1960s -70s Ranch style houses, but the c. 1990s houses are typical Tudor Revival styles. Some of the Non-contributing houses do not contribute because they have been substantially altered so that the historic elements are either visually overwhelmed or completely refaced.

The District's development began along Hollywood Boulevard and north of it along Bonita Drive, Poinciana Drive, and La Playa Place, three initial streets set aside specifically and only for houses in the Spanish Mission style. Until the 1940s, moreover, these three streets remained exclusively Spanish Mission or Spanish Eclectic. From there, the District developed along side streets, including Ventura Drive, and Hermosa, Pamona, and Malaga Avenues also north of Hollywood Boulevard for Spanish and English Tudor styles; then to La Prado Circle; and then to the Granada Sector or Fourth Addition including Gran Avenue, La Jeune Way, English Circle, La Prado Place, and Poinciana and La Playa Place south of Hollywood Boulevard for development of both Tudor Revival styles and Spanish styles. In a 1927 plat map, boundaries for development included most of the Hollywood Historic District with the exception of Greenwood Street/Ascott Drive which was included by 1929. but, with the exception of two late 1920s Craftsman Bungalows, was not built until the 1940s: this map also included the pre-existing Union Hill Cemetery in its corporate boundaries. In addition to the Greenwood Street area, the area that was the last to develop, although was originally laid out, was the

=====

southernmost portion that includes Devon, Hampton, Yorkshire, and Windsor Drives which became the Fifth Addition.

The Hollywood Historic District is laid out in curvilinear blocks mostly representative of earlier building phases, and rectilinear blocks primarily in later building phases. Various nodes are defined by *cul de sacs* and a break between rectilinear and curvilinear blocks. The entire district includes sidewalks, and there are several extant street grates that are identified as belonging to the Town of Hollywood.

The Spanish Mission sector is characterized by residential structures with large yards and one, one and one-half, and two-story mostly stucco houses most of which retain flat terra cotta tile roofs, some with crenellated rooflines (Miller House, Inv. #54), parapets, and wood windows primarily 6:6 or 6:1, many arched but also numerous rectangular. There are also several brick Spanish styles (Inv.#s 70, 71). Other prevalent detailing are porch loggia (Inv. #s 7, the Salie House # 7, 12, 28; Inv. # 33 has a multiple bay loggia) or recessed entrance bay porches (Inv. #s 15, 17, 19, 24) some with multiple recessed bays (Inv. #s 30, 32) and a number with scrolled columns (Inv. #s 22, 52, 41, 110, 307) or scrolled pilasters (the Salie House, Inv.# 7), stucco over brick chimneys many of which are highly decorative, towers (Inv.#s 7, the Salie House, 38, 80, and 44, the Nelson-Koplon House), balconies (Inv. #s 9, and 40, the Harbert House), and colorful ceramic tile inlays (Inv. # 51, the Doughty-Sooter House). Many retain original highly decorative 1920s wrought iron balcony and porch detailing many of which are on Bonita Drive (Inv. #s 41, the Smith-Wood House, #42, 43, the Foster-Herlong-Munger House, and #44, developer Clarence Nelson's house). In addition, many retain one-car stucco garages and some retain two-story stucco carriage houses (Inv. #s 13, 52). Several retain decorative stucco walls (Inv. # 20, 21, 11), and all retain planned driveways and walks. Most residences are rectangular or L-shaped, but there are excellent example of the U-shaped form (Inv. #59, Perry House), T-shaped form (Inv. #33), and I-forms (Inv. #s 61, 62). In addition to residences, the Spanish Mission sector contains the c. 1925 Spanish style Hollywood City Hall/American Legion Post #129 (Inv. #1).

Within the predominantly Spanish Mission sector, however, there are several c. 1920s Tudor Revival styles (Inv. # 90, 99, and 100, the Hahn House), c. 1930s Tudor styles (#105), and c. 1940s Tudor styles, as well as a number of c. 1940s Minimal Traditional styles. La Playa Place, La Jeune, La Prado, and Gran all have both excellent examples of Spanish Mission and Tudor Revival styles. In addition, the c. 1928 Tudor Revival Shades Cahaba School is prominent at the intersection of Hollywood Boulevard and Montgomery Highway that leads into the District. The presence of both defining styles at the eastern entrance into the neighborhood defines the historic boundaries of the district and separates it dramatically from Highway 31 which immediately becomes characterized by post-1960s commercial structures.

Outside the Spanish Mission sector, Tudor Revival styles are predominant although there are significant pockets and individual examples of c. 1940s-early 1950s Minimal Traditional styles throughout. There are no examples of Spanish Mission style houses south of Poinciana Drive. The north side of Poinciana Drive is primarily c. 1920s Tudor Revival; and the south side (Inv. #122-140 and Inv. #221-242) is mostly c. 1960s - 70s brick Ranch-style houses so that Poinciana Drive reflects a dramatic visual transition from Spanish Mission to Tudor Revival. The later, 1960s-70s, Ranch styles are very good examples of the style and will be eligible for inclusion in the district when they reach the 50-year mark as the latest intact development of the District.

The District's Tudor style houses are concentrated most heavily south of Hollywood Boulevard on Poinciana Drive, Le

=====

Jeune Way, La Prado Place, and English Circle, where they are also the most well-articulated. They are typically one and two story brick, or brick and stucco structures with highly decorative gabled roofs, mostly multi-gabled (Inv. #247 is a fine example of an unusual number of gables), arched entrances, some pointed arches (Inv. #272, the J. L. Hughes House, and Inv. #257, the Akers-Payne House), some with hip roofs and dormers; and most with double hung wood windows typically 6:6 or 6:1 or metal casement windows (Inv. #s 257, Inv.225, a nice c. 1940s example). There are also, however, excellent examples of quarried stone Tudor houses (Inv. #s 268 and 259, the Dye House are perhaps the most stylized); one wonderful rubblestone bungalow (Inv. #207), and there are several good examples of a blend of Spanish Mission and Tudor Revival revealing stucco or stucco over brick facades with gables and arched windows (Inv. # 186, the Francis-Woolridge House). Most have one or more brick chimneys and many are highly decorative (the Bradley House, Inv. #239, has limestone decorative elements that are stepped; and the Stewart House, Inv. # 243, has both twin brick chimneys and an additional chimney with clay pots and limestone details). In addition, entrance bay loggia porches or entrance bay recessed porches are prominent, and there are excellent examples of multiple bay recessed porches (Inv. #s 155 and 156) and multiple bay attached porches (Inv. #s 189 and 192). Significant detailing includes stone quarry surrounds (Inv. #143, 256, the Worrell-Scalise House), stacked entrance arches (Inv. #143 and 151), flared or cat slide gables (Inv. #256; and the Worrell-Scalise House, #271), and octagonal front bay. Inv. #140, c. 1930s, includes massive rubblestone columns. Most Tudor styles are rectangular forms or L-shaped, but with some good examples of T-shaped (Inv. #s 241 and 248, which also has a twin decorative gable), or angular (Inv. 323 is the best example).

Archaeological Component

Although no archaeological testing has been conducted, the potential for subsurface materials remains is minimal.

INVENTORY

1. Hollywood City Hall/American Legion Post 129. 4 Hollywood Boulevard. (c. 1925).
One story free standing Spanish style stucco building with a side gabled asphalt roof. There is a multiple bay loggia porch that is partially enclosed and there are no windows. There is also a poured concrete foundation.
2. Masonic Lodge. 6 Hollywood Boulevard. (c.1940s).
One story free standing brick building with a flat roof and projecting parapet. The windows are block glass and there is an entrance bay stoop porch. There is also a brick foundation.
3. Shades Cahaba School. 3001 Montgomery Highway. (c. 1928; 1998).
One story Tudor Revival freestanding brick T-shaped school with multiple arched cross gables, an asphalt roof, and a central tower. There are 4:4 double hung wood windows throughout and a brick foundation. There was a second entrance built c. 1998 on the Montgomery Highway façade that virtually matches the original Hollywood Boulevard façade.
4. House. 10 Hollywood Boulevard. (c. 1960s).
One story Ranch style brick house with side oriented gabled asphalt roof. There are 1:1 windows throughout, an inset porch, one exterior brick chimney and a brick foundation. (NC)

=====

5. House. 12 Hollywood Boulevard. (c. 1960s).

One story Ranch style painted brick house with a side oriented gabled asphalt roof. There are 2:2 horizontal double hung wood windows and some fixed multi-paned wood windows throughout. There is also an entrance bay stoop porch, one interior brick chimney and a brick foundation. (NC)

6. House. 14 Hollywood Boulevard. (c. 1940s).

One and one half story painted brick house with Tudor Revival influences. There is a cross gabled wood shingle roof including three front gables, 8:8 double hung wood windows throughout, and an entrance bay stoop porch. There is also one interior quarried stone and brick chimney, and a brick foundation.

7. Salie House. 11 Bonita Drive. (1927).

Two story Spanish style stucco house with a front gabled terra cotta roof on the west bay façade; a flat terra cotta tile roof on the east bay façade; and an octagonal tower with a flat terra cotta roof as well as a partial gable terra cotta roof in the central bay. There are 8:8 and 6:6 double hung wood windows, arched 6-light windows of varying sizes along the east and central bay first floor facades, an entrance bay loggia porch, pairs of French doors along the east façade, one brick interior chimney, a poured concrete foundation.

This house was designed by Jacob E. Salie as his own residence and is one of the most stylized in the District. There is also a Spanish style stucco wall around the house.

A. Carriage House. (1927).

Two-story stucco carriage house.

8. Bailey-Hardin House. 9 Bonita Drive. (1926).

One story Spanish style stucco house with a cross gabled roof on one bay and a flat asphalt roof on an end bay. There are 6:6 double hung wood windows with limestone sills throughout, a series of decorative terra cotta insets around the arched front entrance, an single bay stoop porch with a shed roof and pairs of simple square wood columns, one interior stucco chimney, and a poured concrete foundation.

A. Garage/dwelling.

Two story stucco garage and upstairs dwelling with casement windows throughout and a projecting parapet.

9. House. 10 Bonita Drive. (c. 1920s).

Two story, with one story wing, Spanish style stucco house with a hip terra cotta tile roof and a very decorative projecting parapet that extends the length of the house and has a series of central arches which are squared off at the flanks. There is also an open balcony over one first story bay with a series of decorative limestone columns and a limestone cap, fixed wood windows throughout, an entrance bay loggia porch, one exterior stucco chimney and a brick foundation. This is a highly stylized house with a very complex Spanish style roof system.

STATEMENT OF SIGNIFICANCE

Architecture

The Hollywood Historic District is significant under Criterion C (Architecture) for its excellent collection of c. 1920-1940s Spanish Mission or Spanish Eclectic and Tudor Revival styles including very fine examples of work by prominent local architects including Jacob E. Salie, H. D. Breeding, Warren Knight & Davis, and Denham and Denham. In addition, there are good examples of Minimal Traditional, and highly stylized early Ranch style houses that are well integrated into the affluent Hollywood Historic District.

The District contains the largest and best collection of c. 1920s Spanish style architecture outside of Mobile in the State of Alabama. Its 72 Spanish Mission or Spanish Eclectic residences, and one institutional building, reflect the American passion, especially in sunnier climates, for the Spanish Mission style made popular in California and southwestern suburbs during the 1880s-1920, and for Spanish Eclectic styles after World War I. These are highly stylized examples of the styles, ranging from symmetrical to asymmetrical one story bungalows to two story mansions, and are typically detailed with arched windows, single and multi-bay arched loggia, terra cotta tiled roofs, highly decorative chimneys, and some with decorative projecting parapets, octagonal bays, towers and turrets, and balconies. Many also retain original decorative wrought iron railing. Most have spacious, treed lawns and all have designed drives and sidewalks. Many have retained Spanish style one-car garages and two-story carriage houses.

The District is also significant for its fine collection of English Tudor architecture. Built between the late 1920s and the 1940s, the structures, including the c. 1928 Shades Cahaba School, are brick with well-defined Tudor detailing including arched and rectangular wood windows and metal casement windows, multiple gables many of them steeply pitched, cat slide gables, half timbers in stucco gables, highly decorative brick features including stacked arched entrances and decorative brick entrance bay walls, porches, and especially well articulated decorative chimneys many with clay pots or brick or stone insets. All are one, one and one-half, or two-story and many retain original one-car brick or brick and stucco garages or two-story carriage houses. The district is an excellent reflection, in particular, of the American desire for Tudor Revival architecture during the 1920s and 30s.

=====

In addition to Spanish Mission and Spanish Eclectic and English Tudor styles, the District is significant for its excellent documentation of c. 1940s-early 1950s Minimal Traditional and early Ranch styles. All of the Minimal Traditional styles are one or one story with basement brick with double hung wood or metal casement windows, gabled or hipped roofs, and some contain garages in the basement. There are some excellent examples of Minimal Traditional styles that also include Spanish influences including Inv. # 35 and Inv. # 73; others have a Tudor or Modernistic influence Inv. # 72. The early Ranch style houses are one, one story with basement, or two story brick structures many with asphalt hip roofs, metal casements windows, garages in the basement, some with quarried stone work or decorative brick or stone walls. Many of these are highly stylized and reflect this affluent historic neighborhood (Inv. # 249 and Inv. # 473).

Community Planning and Development

The Hollywood Historic District is significant under Criterion C (Community Planning and Development) as the earliest, and one of the most well articulated, planned communities in the State including residential, government, educational, funereal, and social resources, and it also reflects the national Progressive Era trend toward planned communities. Hollywood was conceived by Clyde Nelson in 1924 as an exclusive suburb of Birmingham that would be built for fashionable Spanish Mission and English Tudor architecture. To accomplish that, Nelson, a real estate developer who later developed other planned sub-divisions in Huntsville and Virginia, sent his contractors to Miami to study the Mission style for months before they could break ground. Specific sections of the development were set aside for each style and, when the town incorporated in 1926, it adopted extensive ordinances to restrict style, use, colors, signage, minimum cost of houses, and style of street lamps. The ordinances were strictly enforced and forbade unauthorized styles from being constructed. In addition, Nelson's plan included paving streets and sidewalks, street lighting, iron entrance gates into the District (which are no longer extant), construction of a Community Building/ later City Hall, School, Country Club (which later burned), as well as areas for business districts and apartment houses which never materialized once the Town of Hollywood merged with the City of Homewood in 1929. Once it merged, however, Hollywood's restrictive guidelines and ordinances continued to be enforced.

In addition, Nelson's plan for Hollywood to be a sub-division for prominent families proved successful during the 1920s and 1930s. Among those that built homes in the District were Clyde Nelson; John Harbert; Jacob E. Salie; Dr. Haickel Elkourie who was a prominent Birmingham physician listed in the Alabama Blue Book and Social Register but later went to jail for tax evasion, Jack Munger and George Barber, two early Birmingham real estate men and developers. Many other affluent citizens built homes in the district from during the 1940s and early 1950s which is documented by the excellent examples of large Minimal Traditional houses and very highly stylized early Ranch styles. All of the intact Minimal Traditional and early Ranch style houses built by 1952 are included as contributing resources in the district.

HISTORICAL NARRATIVE

The development of Hollywood was the vision and brainchild of Clyde Nelson, president of the Nelson Real Estate Company of Birmingham. Founded in 1923, the Company grew at a brisk pace so that by 1928, according to a 1928 issue of Birmingham magazine, it was the largest company in the South specializing solely in real estate sales. Only one year after the company's organization, however, Nelson and two other young men, William J. Thornton, vice-

=====
president, and H. H. Henrod, secretary, pinned their professional hopes on the founding of Hollywood, planned as an upscale sub-division of Birmingham that would take its lucky residents "out of the Smoke Zone Into the Ozone."¹

Clyde Nelson was born in Columbiana, Alabama on January 5, 1898, the son of Dr. Thomas Green and Louella Teague Nelson, both natives of Columbiana. Mrs. Nelson was principal of the Columbiana Public School, and upon retirement, spent much of her time working with the poor in Birmingham and teaching at a Birmingham mission. Her husband, Dr. Nelson, was the son of Columbiana plantation owners.²

Upon graduating from high school, the young Mr. Nelson went to the University of Alabama where he was a member of Sigma Nu Fraternity, became an ROTC captain, and from which he received a Bachelor of Science degree. Upon graduation, he went into the real estate business with Jemison Real Estate Company, the largest developers in Birmingham by the early 1920s. In 1923, he, Thornton, and H. H. Henrod formed Nelson Real Estate Company, and in 1924, they set their sights on Hollywood.³ At that time, he and his partners, laid out the boundaries not including any park or recreational space. The plan also included paving streets before housing construction took place; the first paved street was Bonita Drive, completed in 1924, followed by Hollywood Boulevard.⁴

A vital part of Nelson's plan for his sub-division was that it be especially fashionable and include primarily Spanish Mission and Tudor Revival styles of architecture. He elected to start with Spanish Mission which he planned as the only style to be constructed along the first three streets to be laid out, that of Bonita Drive, Poinciana Drive and La Prado Place. Work would commence there by 1925, and then proceed in 1925-26, to side streets, including Ventura Drive, Hermosa, Malaga, and Pamona Avenues, and to additional main streets including Le Jeune Way, La Prado Place, and English Circle set aside for Tudor Revival styles. In addition, lots would be large and treed, with 100-foot frontages, with lots ranging in cost from \$1,800 - 3,700 and houses ranging from \$15,000 - \$35,000.⁵

No house would be built, however until the Mission style was thoroughly studied and understood. For that, Nelson deployed his contractors to Miami to work and study for four to five months before being allowed to dig the first foundation. In addition, he commissioned one man, Sam Christie, to do all of his masonry work using a technique he would learn in Coral Gables where Nelson sent him to learn to apply concrete directly to steel framework, and to create a variety of stucco finishes.⁶

Nelson's plan also called for a particular emphasis on stylistic details and on marketing. Many of the Mission houses were built with decorative wrought iron which, according to local recollections and newspaper, hailed from early 1800s France. According to sources, John Harbert (whose name later became synonymous with big-time international construction and engineering) also became an instrumental player in Nelson's design dreams. During the earliest development of the district, it is said, he traveled to New Orleans where buildings were being cleared out in the French

=====

Quarter. Dozens of buildings were being demolished, prompting Harbert to purchase a freight car load of decorative wrought iron that remained from them, and to ship it home to Hollywood. According to residents, this particular wrought iron found its way onto a number of Mission style homes.⁷

Nelson made the most of the charm and whimsy of Hollywood by creating a marketing plan that mixed entertainment with business. As builder he would build, and as promoter, he would promote: when the first floor of a new house was built, he would bring in known opera and popular singers from around the country for concerts on the lawns of Hollywood residents. Among the performers who anointed the new suburb were the Tommy Weyhand Orchestra and Vernon Kimbrough, a famous opera singer and brother of a Birminghamian.⁸

In addition, although the exact date remains unclear, Nelson also provided public transportation to his Hollywood dwellers. While the first streetcar in this area south of Red Mountain had been operating since 1911, Nelson was concerned that direct Hollywood access to transportation would be critical in attracting affluent residents. For that reason, he purchased and provided a 40-seat bus, complete with leather seats, to the district which ran hourly from Hollywood downtown to 20th Street and 2nd Avenue North.⁹

Between 1924 and 1926, perhaps as many as 75-100 houses were built. By then, it had become clear to Nelson and other residents that the neighborhood needed to incorporate in order to provide needed services and municipal functions such as trash and garbage collection, police and fire protection, and public improvements.¹⁰

On October 26, 1926, the Town of Hollywood petitioned to incorporate under and pursuant to Chapter 43 of the Code of Alabama, 1923. According to the Code, an area with a population of more than 100 persons with residences that are "contiguous to each other and form a homogenous settlement or community" could incorporate if sixty percent of owners approve the move.¹¹ One month later, on November 29, an election was held at the c. 1925 Community House/ later Town Hall (Inv. #1) at the corner of Hollywood boulevard and Montgomery Highway; election monitors were residents H. G. Marsh, Clarence Lloyd, and I. W. Miller. Of the original 176 Hollywood residents, ¹² none voted against incorporation. ¹³

On January 14, 1927, the new town held its first election at the Hollywood Town Hall to select a Mayor and five-member City council; election inspectors were I. W. Miller, C. H. Nelson, and T. M. Francis. Hollywood's first homeowner, Clarence Lloyd (Inv. #58), became its first and only mayor with 17 votes. Those elected to the Council were H. G. Marsh, T. L. Bissell, I. W. Miller, and John P. McCoy, and T. M. Francis.¹⁴

By February, the Town of Hollywood was up and running and ready to fulfill its goals of incorporation. By then, towns and communities all over the United States were committed to ideals made popular during the Progressive Era

=====
(c. 1900-1920) which hailed the virtues of "good" government and the need for such governments to promote social virtue through its public institutions. Moreover, the 1926 Supreme Court decision upholding the legality of zoning regulations confirmed the Town of Hollywood's belief in thorough community planning and development.

During its first full year, the new town put into place an impressive network of ordinances and city codes, personnel to implement and enforce them, and monies to realize their goals. At its Town meeting of February 25, 1927, Aubrey Allison was appointed town clerk. In addition, it adopted its first ordinances, providing for a Plumbing Code, an Electrical Code, and a Building Code. It was also decided that these ordinances and all future public notices be posted at a public bulletin board, one at the entrance to English Circle in the English Tudor section, and one at the intersection of Bonita Drive and La Prado Circle in the Spanish section. On February 26, in order to enforce and implement these new laws, J. E. Spencer was appointed Chief Building Inspector along with four assistant inspectors; David Stanton was appointed Chief Plumbing Inspector along with a staff of six; and C. M. Baker was appointed Chief electrical Inspector who had a staff of four assistants.¹⁵

The next day, Hollywood passed its first zoning and buildings ordinances. It stipulated that all residents were to "maintain on their premises a fly-proof garbage container, from which all garbage collection would occur by the new Garbage Department of the Town of Hollywood." Its garbage collector was Will Lee, nephew of prominent African-American property owner, Damon Lee, and resident of the nearby Homewood neighborhood of Rosedale. According to a 1976 interview with Hollywood Mayor Clarence Lloyd, Lee "did a beautiful job of keeping the neighborhood neat." In addition to Lee, "Red" Cunningham was named the town's only police officer; it would not appoint a fire person. ¹⁶

At the same meeting, "An Ordinance Further Regulating Building in the Town of Hollywood" passed which stipulated the minimum cost of a dwelling to be \$7,500.00, and that all plans and specifications for new structures must be submitted to the Town Council for review and approval. Further, the town approved the first of many public improvements, this one to pave "certain avenues and streets," and it received bids from John Ham (\$42,258.73), Southern Roads (\$42,454.79), and Bessemer Engineering Construction Company (\$43,150.28) to perform the work. The investment firms of Ward, Sterne, Co., and Caldwell Company with the Steiner Brothers and Marx and Company, submitted proposals to issue bonds to finance the work. Ward, Sterne, and Co. won the contract. In addition, the Hollywood Land Co. formed about this time, and appointed Jacob E. Salie its architect, apparently to oversee future development. ¹⁷

In May, Hollywood passed a Public Health ordinance to "regulate the keeping, harboring, and confining of animals and fowls, and to regulate places or premises used for or in connection therewith, and to prevent the reproduction of flies." The law mandated city inspections and regulated the size (25,000 square feet) of corrals, and the keeping of stables. Citizens, it continued, could not keep "animals of the equine, bovine, or swine except in a stable or corral."¹⁸ This concern, in fact, was one that motivated other areas – primarily Rosedale and Edgewood –to incorporate into the City of Homewood that same year. ¹⁹

=====
Following that, in June, the Town voted to levy taxes, at a rate of fifty cents on the hundred dollars, on "all real and personal property" to pay for its services. In addition, it voted in a contract with the Alabama Power Company to provide for a "white way," that is, 21 ornamental white way lamps of 232 watts each. For that, the town agreed to pay \$105.00 per lamp to install and \$966.96 per annum. Moreover, each 200 watt "all night lamp" cost \$48.00 per year and would be set to burn one-half hour after sunset to one-half hour before sunrise.²⁰ Electrical power was, by then, supplied by Alabama Power company which had lines running through Hollywood into which it allowed the town to tie.²¹

During this same period, Spring 1927, the Town of Hollywood passed detailed regulations that stipulated building use, use districts, as well as typical for the era racial restrictions for residential areas. It provided for a Commercial or Industrial District, which consisted of a single lot, Lot 72 at the corner of Hollywood Boulevard and the Montgomery Highway, and could be built for a public garage or service station under certain design restrictions. Moreover, it prohibited many industrial uses including wrecking yard, blacksmith or horseshoeing establishment, milk bottling or distribution station, veterinary infirmary, warehouse, and laundry.²²

In residential districts, there were many more explicit restrictions and guidelines. It regulated lot size, side and rear yard, front yards and set backs, terraces, stables, placement of houses so that their sides would not abut the street, garages which were restricted to two-car capacity primarily for the owner's use and on an area not less than 1,800 square feet, and alleys. In addition, "no building or part thereof shall be occupied or used by a person or persons of the negro race; provided, however, that this sections shall not be interpreted to prohibit. . . a negro servant, chauffeur or other employee when the employee resides in the same building or in a building upon the same lot."²³ In September, the first of many sewer and street public improvements were approved and funded, setting the tone for similar improvements throughout the period of Hollywood's township well into its history as part of the City of Homewood. At this time, curbs of Portland cement concrete combined with 6-inch thick and 12-inch wide gutters were specified; and storm sewers of "brick and concrete and vitrified clay and cement drainage pipe, with inlets and manholes and cast iron covers. Plans for both would be provide by the new Town Engineer, B. H. Frasch, and the cost was to be assessed against the parcels of affected streets and alleys.²⁴

In the next few months, sidewalks were approved for La Playa Place and Poinciana Drive, and specifications for ditches were determined. All ditches, according to the town's code, "will be not less than 12 inches deep and never more than 36 inches high with a maximum of six inches to 100 foot fall . . ." The ditch bottoms would be lined with cinders, coke, or slag 12 inches under tile and 2 inches over tile."²⁵ In addition, fire hydrants were installed, which would access three large Birmingham Water Works pipes that traveled through Hollywood and were also used for domestic use.²⁶

By the close of 1928, approximately one dozen public improvement ordinances had been approved and funded, most

=====

of which included the construction of sewers, streets, curbs and gutters present and well as future development. In addition, Hollywood developer Clyde Nelson completed construction of some two hundred homes, followed by the Hollywood Country Club at the southernmost tip of the District near the intersection of Durham Drive and Shades Creek Parkway.²⁷ The new club was designed by prominent local architect Jacob E. Salie in, according to a 1928 issue of Birmingham magazine, a "modern Flemish" style, with a "mottled slate roof, plastered walls in a travertine finish, with most of the woodwork in pecky cypress." It also contained open terraces adequate to "accommodate large dancing groups," a dining room to easily serve 600 persons for dinner, a lounge with "luxurious divans, antique chairs, soft velvet rugs and playing miniature fountains," a grill room, many quaint balconies overlooking formal gardens, and a large swimming pool with a "sandy bathing beach 130 feet long about which are laced colorful chairs and beach umbrellas." Plans were also underway for tennis courts and golf course, but these never materialized.²⁸

In December, 1928, moreover, the Town of Hollywood expanded its public transportation services. The Summers Bus and Transportation Company agreed to operate the bus earlier purchased by Clyde Nelson and, upon incorporation, owned by the Town of Hollywood, under the supervision of the Nelson Real Estate Company or Hollywood Land Company as a public bus line. The new schedule would provide hourly service between Hollywood and Fourth Avenue and 21st Street North in downtown Birmingham.²⁹

The year 1929 opened with the Town of Hollywood's approving additional public improvements including a water line and fire plugs in the Greenwood Street and Ascot Road area, moving ahead with the Sixth Addition of Hollywood, citing several citizens for "misrepresenting" building plans or "infringing on the laws of the Building Code," expanding its Commercial and Industrial Use Districts to include eighteen lots instead of one, and prohibiting a non-conforming apartment building and kindergarten from being built. The year ended, however, with the town's merging into the City of Homewood.³⁰

By October 1929, the Town of Hollywood was considering a merger and annexation resolution. It was not the first time such a merger had been considered; in 1927, when the neighborhoods of Edgewood, Rosedale, and Grove Park came together to form Homewood, many in the new City of Homewood unsuccessfully urged Hollywood to join them. Now, some two years later, Hollywood was faced with the fact that some residents had defaulted on their taxes, and the Town had had to assume assessments for public improvements of Hollywood's Fifth Addition. Hollywood was, in fact, over a million dollars in debt by late 1929; the City of Homewood, however, had recently experienced a building boom and had healthy coffers.³¹

It was agreed that "within a reasonable time" after the merger, certain public services and facilities would be provided for the Hollywood district including fire alarms, additional sewers, and provide for a new grammar school site either adjoining the existing Shades Cahaba School or through the purchase of other land. Moreover, it was determined that the City of Homewood would continue the maintenance of street lights and bus transportation.³²

²⁷ According to 1929 Sanborn maps and the Hollywood Minute Book, 1928, there was a Tuberculosis Sanatorium on the site that was razed in order to build the Country Club.

=====
On November, 18, 1929, the merger was again discussed, with Hollywood being divided up into two wards, Ward 4 and Ward 5, of the City of Homewood. The 4th Ward consisted of all of the territory lying south and west of Hampton Drive and Poinciana Drive; and the 5th Ward consisted of all of the territory lying north and east of Hampton Drive and Poinciana Drive. D. W. C. Yarbrough and H. G. Marsh were chosen to represent Ward 4 on the Homewood City Council; and J. H. Doughy and T. M. Francis were selected from Ward 5.³³

At the November 25 meeting of the Homewood City Council, the merger was formalized and swelling Homewood's population to 6,103.³⁴ In addition, matters of especial interest to Hollywood were taken up. At that time, Homewood's Mayor Charles Rice asserted that it would likely be three years before Hollywood's sewers could be completely connected to the county sewer line, so that temporary disposal plants be constructed to handle the interim. In addition, the proposed new Hollywood City Councilmen urged the City of Homewood to continue to enforce the "building requirements, types of houses, etc." In response Mayor Rice instructed his Building Inspector not to issue any building permits there until the plans were approved by the architect for the Hollywood Land Company, Jacob E. Salie, "and not at that time unless the plans were in accordance with the old ordinances of Hollywood."³⁵

As 1930 opened, one of the most serious and persistent issues effecting Hollywood was again put on the table. Homewood Mayor Rice stated his concern that if sewers were not promptly constructed in Hollywood, future development in what he repeatedly referred to as the "most desirable neighborhood in Homewood," would be retarded. Moreover, he worried publicly that unless the sewers were quickly constructed, and because the current Hollywood septic tanks had failed making it necessary to dig up disposal fields, "it might result in sickness to the people."³⁶

Within the next few months, Hollywood found itself under pressure. By then, its old Zoning Ordinance was under fire, and faced challenged in the State of Alabama Supreme Court. Moreover, the Graybar Electric Company was suing the Nelson Real Estate Company for non-payment of lamp posts in Hollywood, and public improvements along Ascot Road had been held up pending a determination as to whether owners abutting the street would accept assessment for the cost of the work.³⁷

By then, early 1930, the City of Homewood and its Hollywood sub-division were, like the rest of the State and country, struggling with the effects of the Wall Street stock market crash and ensuing economic depression. As a result, in February 1930, a police officer was laid off. By late March, the Homewood City Council reported "a very substantial decline in revenue due to a falling off of court fines, building permit licenses, and inspection dues attributable to the extreme financial depression during the past . . . months." In response, the Council introduced a gasoline tax of one cent per gallon to try to replenish its tax base. Some council members opposed the tax, however, that City expenses and salaries should be lowered before such a tax was imposed. To this, Mayor Rice said that "no substantial reduction in operating expenses could be made without serious embarrassment to the efficiency of the operating personnel."³⁸

=====
By August, moreover, the beleaguered Town of Hollywood zoning ordinance required that a new ordinance be adopted for the sub-division of Hollywood. On August 6, 1930, the Homewood City Council divided that "portion of the City of Homewood, Alabama, which formerly constituted the Town of Hollywood, into districts" for the purpose of regulating and restricting use and design there. The approved ordinance was *verbatim* the old Hollywood Zoning Ordinance. Within a few months, a sign proposal was rejected for Hollywood, it being out of compliance with the new ordinance and a proposal to erect a filling station at the corner of Hollywood Boulevard and Montgomery Highway – Lot 72 that was originally the only lot in the Town of Hollywood set aside for business purposes – was approved.³⁹ By March 1931, the Pure Oil Company was approached to "change its color design to conform to the general color scheme in the Spanish section of Hollywood. Later that month, design guidelines were adopted for the Country Club sector of Hollywood, to be in keeping with "the types of houses and architecture of the rest of Hollywood."⁴⁰

For the remainder of 1930 and into 1931, the City of Homewood and its Hollywood residents worried and struggled with the deteriorating economy. Against Mayor Rice's resistance, all city employees' salaries were cut 10%; in addition, bills were in arrears, and residents in English Circle were criticized for wasting "excessive" amounts of water. Water, repeated flooding, and sewers, it is apparent, remained of critical importance for Hollywood, in particular, during this time.⁴¹

In late 1930, the City of Homewood began a series of applications to the Federal government for funds to construct the Hollywood sewers. By November, it had approved an application for \$60,000 (later scaled back to \$56,000) to the Hoover administration's Reconstruction Finance Corporation to build a sanitary sewer system to drain the "Spanish Section, English Section, and Fourth and Fifth Additions of Hollywood (Dec 30,32). A few years later, in 1934, the City made application to the Public Works Administration (PWA), an agency of the Roosevelt Administration's New Deal, for similar funding, but in July, the PWA "expressed doubt as to the feasibility of making a loan . . . based on rentals" some being assessed to actual home connections, and some begin assessed on vacant, unimproved land. On August 27, therefore, the City Council decided to amend the application omitting the Country Club section, because there were fewer houses there; within the next few months, however, the Council had also omitted the Fourth and Fifth Additions from the application leaving only the Spanish and English sections in.⁴²

By September 10, 1934, the application looked "favorable;" and on January 14, the Council suggested that "somebody" go to Montgomery to tell Governor Bibb Graves of the matter's urgency. On December 9, it was reported that the application had been approved in Washington and further that it included nearly all of the Spanish and English sections and parts of the Fourth and Fifth Additions. Work began on March 12, 1936; but by August, work had ceased pending a new application funding which was approved in March 1937 . A year later, in 1936, all applications to the Public Works Administration was "disallowed for the time being (for street paving for which all work had ceased)." On April 6, 1940, the WPA sent a letter saying that it would reopen the City-wide Street Improvement Project if city funds could be made available to sponsor the project.⁴³

On a happier note, however, other public improvements continued in the Hollywood district throughout the 1930s. In

June, it purchased five lots in Hollywood on which to build a school. Only weeks later, the Council voted to purchase an easement south of Shades Creek Parkway to serve as a buffer between Hollywood and development in nearby Mountain Brook. "This land," the ordinance read, "shall not be subdivided or cut up into lots for residential or business purposes."⁴⁴ In addition, a park was approved opposite Hollywood Country Club for which Red Cross labor was utilized, stone retaining walls were constructed at the end of Bonita Drive and at the end of Ascot Road. In June 1938, moreover Hollywood petitioned for sidewalks along Hollywood Boulevard from Malaga Avenue to Greenwood Street.

45
Although the struggle to provide sewers in Hollywood occupied a great deal of time and energy throughout the 1930s, it was, of course, not the only matter of interest there. Although Jefferson County Board of Equalization records reveal that quite a few Hollywood homes became rental for approximately \$40 – \$50 per month and slipped into disrepair, more than new houses were built throughout the District during the Depression decade of the 1930s, sidewalks were built, road cracks repaired, and conflicts with the Building Code occasionally arose. In addition, efforts to legalize beer and wine were taken up a number of times, prohibitions against gambling in the City were passed, and efforts to beautify Homewood continued. On May 20, 1936, Mrs. T. M. Francis – wife of a Homewood City Councilman and later President of the State Board of Parks and Recreation - along with other representatives of Hollywood Country Club, appealed to Council and advertising companies to "make their streets and highways more beautiful." The Club "went on record as putting up a fight against the erection of billboards . . ." Francis said that "through her affiliation with the Federation of Women's Clubs, they 'preferred to trade with business concerns not using billboards on streets and highways for advertising.'" An ordinance restricting the use of billboards was deferred until the June 10, 1935 meeting whereupon it passed.⁴⁶

During the 1940s and 50s, many more public improvements were completed in the Hollywood district, and hundreds more houses were built. Although it is unclear exactly when earlier design ordinances were lifted or simply ignored, it is apparent that by the 1940s and 50s modern contemporary styles were being built all over Hollywood – and no guidelines have been enforced since the late 1930s. Many c. 1940s styles were in the Minimal Traditional or early Ranch styles, but some were also English Tudor. By the early 1950s, moreover, Hollywood continued to build mostly Minimal Traditional and early Ranch styles. While construction was dispersed throughout the District, it concentrated in the late 1940s and early 1950s in the Norfolk/ Rumson/Yorkshire area, Malaga Avenue and Hermosa Drive, and along Greenwood Street and Ascott Drive.

=====

After that, through the 1960s-70s, many additional Ranch style houses were constructed south of Windsor Drive all the way south to Shades Creek Parkway, the Nelson Real Estate Company's, and the Town of Hollywood's original corporate boundary. As they reach the 50-year mark, they will become potentially eligible to be included in the Hollywood Historic District to reflect the most recent Development of the District.

For now, the Hollywood Historic District remains remarkably intact. It faces, however, several serious threats of encroachment partly by the effects of Highway 280, partly by new major development just on the other side of the Highway that will likely cause serious traffic problems for residents of south Hollywood, and partly from the fashionable trend in Hollywood for new and current residents to "remodel" their already desirable homes into bigger and newer residences which has already obscured the integrity of several structures. To counter these effects, residents have pursued historic preservation efforts and have recently formed the Hollywood Neighborhood Association.

Verbal Boundary Description

The boundary of the Hollywood Historic District is shown on the accompanying map entitled "Hollywood Historic District," 2001, drawn not to scale.

Boundary Justification

The boundary lines were drawn to include resources historically associates with the Town of Hollywood, later the neighborhood of Hollywood within the City of Homewood. The boundary lines were drawn in such a way as to include as many contributing resources as appropriate and to exclude as many non-contributing resources as possible.
