#### DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The wooden covered bridge as a structural type is represented in Washington County by four extant examples built during the third quarter of the nineteenth century. Situated on streams flowing southwest into Washington County from the Green Mountains of nearby Vermont, the covered bridges at Eagleville, Shushan and Rexleigh span the Batten Kill, while the Buskirk Bridge spans the Hoosic River. All four bridges remained open to traffic into the twentieth century. The Eagleville and Rexleigh spans are temporarily closed while undergoing stabilization and repair. Bypassed as the result of road realignment in 1963, the Shushan Bridge is presently being preserved as a local history museum on its original site. The Buskirk span continues in its original use as a vehicular bridge.

The four covered bridges are similar in scale, materials, and The Shushan and Eagleville structures incorporate the patented Town lattice truss, consisting of top and bottom chords laminated wood plank, and a web of diagonal wood planks connected by wood trunnels at each point of intersection. The spans at Buskirk and Rexleigh employ the patented Howe truss, with paired diagonal timbers, single timber counters, and multiple vertical iron rods defining each truss panel. The diagonals and verticals are connected to the upper and lower chords by means of cast-iron bearing The decks of all four bridges consist of wood planks laid on longitudinal stringers and transverse beams supported by the lower chords. The bridges are all sheathed in vertical board siding, and three are covered by wood shingle roofs attached to nail strips. The Rexleigh Bridge is unique among the four spans for its slate roof.

The four covered bridges have all been periodically re-sheathed and re-roofed during their long use as transportation structures. Recent flood damage to the west abutment and some truss elements of the Eagleville Bridge has necessitated temporary closing of the bridge while stabilization and repair work were completed. The Rexleigh Bridge is also closed to traffic pending emergency stabilization of its undermined south abutment and deteriorated lower chord. Grants-in-aid assistance has been requested for this repair work.

The Eagleville, Shushan, Rexleigh, and Buskirk spans are the only extant wooden covered bridges in Washington County, and have been identified as such as part of the on-going Statewide Inventory of Historic Resources.

STATEMENT OF SIGNIFICANCE

The four extant covered wooden bridges of Washington County represent a significant concentration of a relatively rare type of transportation structure once common throughout New York State. Erected by local builders according to the patented Town and Howe truss designs, the wooden spans at Buskirk (1850), Shushan (1858), Eagleville (1858), and Rexleigh (1874) together illustrate the adaptation of standard engineering designs to the specific practical problems of rural bridgebuilding during America's "wooden age."

The covered bridges of Washington County helped to stimulate and direct the development of this rural area during the nineteenth century. Few roads linked the widely scattered population of Washington County, and hilly terrain characterized by meandering streams such as the Batten Kill and the Hoosic dictated the need for reliable, dry crossings on the few principal arteries which existed. An economy based largely upon agriculture and local, water-powered industries required sound bridges on vital market routes. These conditions together with improvements in standard engineering designs for timber bridges brought a wave of wooden bridge construction and replacement to Washington County beginning about 1840.

Local builders, using abundant native timber for construction materials, erected a number of roofed bridges based upon two principal designs: the plank lattice truss patented by Ithiel Town (1820), and the timber and iron truss patented by William Howe (1840). The Town truss type is represented in Washington County by the bridges at Buskirk and at Rexleigh. The Buskirk Bridge, erected to replace an earlier Burr arch truss across the Hoosic, was constructed in 1850 by a builder from nearby Greenwich. The Buskirk span is presently maintained under joint agreement by Washington and Rensselaer Counties, and is perhaps the earliest Howe truss bridge surviving in New York State.

Covered Bridges of Washington County, Washington County, NY

CONTINUATION SHEET Significance ITEM NUMBER #8 PAGE 2

Built in 1874 to serve the small mill community of Rexleigh on the Batten Kill, the Rexleigh, Howe truss bridge is a later example of its type. Constructed of standard sawed timbers, iron tension rods, and cast-iron bearing blocks embossed with the name of their manufacturer, "R. Comins, Troy, N.Y.," the Rexleigh Covered Bridge appears to be a rare surviving example of this type of prefabricated nineteenth-century bridge construction.

The ease of construction afforded local builders by the Town lattice truss explains its popularity in Washington County. At least eleven Town truss bridges are known to have spanned the Batten Kill during the nineteenth century. Of these eleven, only two examples remain in Washington County. The Eagleville Covered Bridge, erected by local builder Ephraim Clapp in 1858, has recently been stabilized and returned to vehicular use following flood damage in 1977. The Shushan Bridge, also built in 1858 by Milton Stevens, has survived as the result of local preservation efforts. Open to the public on a seasonal basis, the Shushan Covered Bridge presently houses a local history collection of artifacts. Both the Eagleville and the Shushan bridges are significant as typical examples of the Town lattice truss design as constructed in New York State during the nineteenth century.

The increasing rarity of wooden truss highway bridges surviving in New York, the unusual concentration of four such structures in a single county, and the social and engineering significance of these transportation structures all contribute to the historic significance of this thematic group.
