DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

Situated between two bluffs overlooking the Mississippi River Valley south of Red Wing, the Red Wing Training School complex forms one of Minnesota's most picturesque landmarks. The administration building was dedicated in 1889 and exemplifies the then popular Richardsonian Romanesque mode of architectural design for educational institutions. Although originally conceived with a total stone facing, the building was constructed as a handsome combination of stone and locally produced red-orange brick. This combination constitutes a unique local variation on the Richardsonian theme.

The interior of the administration building is an open plan, and the tall proportions are impressive, dignified and monumentally scaled, yet the effect is not intimidating or overpowering. Alteration on the first and second floors to accommodate functional demands of the training school's changing facilities has obliterated the original stenciling on the walls and caused the removal of much of the wood as well as the original chandeliers. However, much of the original woodwork remains in the halls staircases, and in the entrance foyer. The third and fourth floors are basically unaltered from the original design, although paint obscures much of the detail and rachness of woodwork which may have been formerly stained and varnished.

To the rear of the administration building is the dining hall addition, constructed during the same era. It is clearly defined as a separate structure and is linked to the administration building by a stone arcade. The exterior walls of the hall are of local Winona stone, in several hues of yellow, and are excellently crafted with heavy buttresses between huge round-arched windows. The interior of the dining hall is a large, two story, completely unobstructed rectangular space of good proportions. There is a wood beamed ceiling, and the present floor is of a dark red terrazzo with a decorative pattern of darker marble tiles, but it is likely the original floor was wood. On the entrance wall a balcony extends the entire length of the room and on the wall opposite the entrance was once a fireplace with a carved wood mantel. Along each sidewall are four large windows with carved frames. Originally this interior was also graced by carved wooden pilaster strips, a dado which ran the perimeter of the hall, and wrought iron light fixtures made by boys in the school when manual training was a part of their educational program. In the 1930's a scullery was added behind the fireplace wall and a serving counter and door were cut into the wall. The scullery addition appears to have been "stuck on" to the dining hall, the original wall existing at the point of connection under a veneer of plaster.

Two more modestly scaled, more utilitarian buildings adjacent to the administration building are related to it in terms of both similar material and style. About 650 feet directly behind the administration building and dining half is the vocational building, originally the engine house and EINSTRUCTION

7. Description

boiler rooms. This building is also constructed in the Romanesque style using stone and Red Wing Brick. The building, despite its two stories and 98 foot tower appears long and horizontal with interesting variety in the roof line and in the placement of the windows and doors. All the windows and doors are outlined with red brick and spaced in groups of twos and threes. The first floor windows are arched and slightly inset, trimmed around with red brick. The doors are also arched ? On the third floor there are three dormers on each side of the center tower. The tower originally served as the water tank.

To the west of the main building is what was originally the first of the boy's cottages. This three story building is of St. Louis pressed brick with foundations up to the window sills of Red Wing stone. The main entrance is a large arched door inset with a wide band of red brick and two arched windows at the side of the entrance hall. Presently this building is used as a chapel.

The superintendent's house, the fifth structure in the complex (1904)differs from the others in that it is of the Georgian style rather than the Roamnesque. It is fairly separated from the quadrangle and its style difference offers no adverse intrusion. The widow's walk on the roof is a unique feature for this geographic location, Ithough it would offer an inviting view of the Mississippi River Valley. The superintendent's house now serves as the Volunteer Service Center.

Built after a design by W. B. Dunnell, a Minneapolis architect schooled at the Ecole des Beaux-Arts in Paris, the main building of the Red Wing Training School was dedicated in (889) in an elaborate ceremony that involved people from the town of Red Wing as well as personnel of the school, signifying a close relationship between the school and the town that has continued to the present day.

Together with other outstanding Romanesque Revival buildings in Minnesota such as the Winona County Courthouse and the Duluth Central High School, the Red Wing School represents a valuable architectural heritage dependent on the local craftsmen and local materials making the school truly a product of the community. The original structures in the school's quadrangle enhance the quality of the main building and preserve its scale while insuring the campus' unity.

The original buildings are historically significant for the positive social approach which they expressed at the end of the last century toward "unfortunate and erring" boys and girls. At the elaborate ceremonial exercises of the laying of the cornerstone in 1890, most of the dignitaries spoke with deep feeling and conviction of their philosophy of treatment of the boys and girls who were placed in the school.

The State Training School at Red Wing should continue to serve its present function long into the future. The buildings lend themselves easily to adaptive uses and such uses should guarantee their future. The administration building is a good example of the practical adaptation of a structurally sound building of the late Nineteenth Century Richardsonian Romanesque style. It is an important element on both the history of Red Wing and the State of Minnesota.

probe in providing and a problem.
