Original Appearance: Perhaps the first structure at Hot Springs was a stone tub carved in a flat layer of rock which caught the waters from the spring and enabled man to use the waters for bathing purposes.

Some time prior to the arrival of the Langfords a dugout had been constructed and subsequently abandoned. This was rehabilitated and served as the Langfords' first home. Shortly thereafter Langford erected a one-room adobe house on a bench overlooking the site. A stone addition, roofed with river cane and corrugated metal and containing two more rooms, was added a year later. Langford also constructed a substantial stone bathhouse at the site of the springs, containing rock tubs plastered with cement. There were also a number of cane and brush bathing shelters at a second spring, downstream from the area. Due to bandit raids and general border unrest, the Langfords left Hot Springs in 1912. When they returned 14 years later in 1927 Langford apparently discovered that the bathhouse had either been destroyed or at least was badly disintegrated. He immediately rebuilt it, but of a somewhat smaller and less substantial construction, being roofed only with canvas. He also constructed at this time a store and a motor court. Only these last two structures remain today.

Present Appearance: Both the store and the motor court are currently being restored by the NPS to their original appearance.

The store is a one-story stone structure approximately 28 x 12 feet in dimension. The walls are constructed of native stone set in earth mortar and painted with a natural limestone mortar. The roof is trussed rafter construction with wood sheathing and corrugated metal roofing. The interior walls are plastered and pointed and, at least during Maggie Smith's occupancy, a celotex or similar material was used as a ceiling attached to the bottom chord of the roof trusses.

The cabins consist of a row of seven attached one-room units, each approximately 11 x 15 feet in size. Of stone construction, the one-story structure has a wood-framed roof with rolled mineral-surfaced roofing. A flagstone terrace along the south side and east and west ends was originally covered by a porch or ramada. The interior of the walls were plastered and the exposed wood joists and wood trim were painted. Four of the rooms contain hand-painted murals.

Two other structures still remain on a hillside across Tornillos Creek to the west. However, these structures were not part of the Langford operation. These are a frame and adobe shack constructed as temporary quarters for a postman, and a stone residence constructed by Charles Livingstone of Alpine, Texas. Both are now in a state of ruin.

2. Location:

Hot Springs is located approximately two miles west of Rio Grande Village at the confluence of Tornillos Creek and the Rio Grande River. It is reached by about one mile of dirt road which joins Park Route 2 where it crosses Tornillos Creek.

7. Description:

Few traces of the original springs now remain, having been reclaimed by the meanderings of the river, and appearing only occasionally with the fluctuation of the stream.
