DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The building is typical of most two-story masonry commercial buildings erected in small towns of the South at the turn of the century. It is of very modified rococo design.

The architect was George Knapp of Lafayette. Other local firms used were the A. J. Moss and Emile Mouton Lumber Company for lumber and hardware, Gaston Landry for the painting chores, and the Paxton Brick Company for the bricks.

The building was constructed on a small parcel of land. The front and east sides of the structure were built on the property line. The west side has a 3-foot alley separating this building from its neighbor and, at the rear is a 30-foot back yard, where in 1908, the prison cells were erected. These cells have since been demolished. The two-story brick edifice is 25 feet wide and 40 feet deep, with 12 inch load-bearing exterior walls. The roof is flat with brick parapets on the front and two sides.

The first floor has a small open entry with two doors, one that enters in to the first floor, and the other to the stairway. The small entryway has a ceramic tile floor with a cast iron threshold.

The door to the stairway leads to the narrow stairs leading to the second floor. The stairs are of wood construction with a 3/4" wood beaded pine side wall and ceiling. At the head of the stairway is a large room located at the rear of the building. This room enters into two smaller front rooms which lead to a very unique semi-circular balcony with attractive wood-turned balusters. Also, in these two front small rooms there previously existed two 3-foot high wrought iron hand rails, which marked the entrance to the doors that lead to the balcony.

The building is erected on a brick chain wall with continuous footing underneath. The first and second floors are constructed with wood floor joists which span from the 12 inch exterior brick walls to interior bearing partitions. There is a shallow wood truss roof spanning the width of the building. The finished floors are made of wood. The ceilings are tongue and groove pine. The rear wall was plastered about 1947 for waterproofing purposes, because roof water poured over it. The roof is pitched from front to rear. The exterior brick walls are tied every eight course of brick for wall reinforcement.

The first floor facade has two large double hung windows with wood sash and open entrance. The windows have semi-eliptical-shaped colored glass transoms. Brick arches above these windows and above the open entrance contain lighter colored brick dentils. These dentils also occur between the windows and at the corners of the building. Window sills are plaster over brick.

The second floor facade has a simi-circular balcony with woodturned balusters and a semi-circular brick arch above. The balcony is covered with a peculiar inverted funnel-shaped zinc roof. There is a double hung window with wood sash on each side of the balcony. These windows have a plaster over brick sill and a semi-eliptical brick arch at top. Over each window is an ornamental design of the same colored brick as used in the dentils. At the very top of the building and in the center is a brick semi-circular section of the parapet wall. This section has brick dentils and is higher than the regular parapet wall. S

	The brick	used on facade is a laro	er type than used on the

The brick used on facade is a larger type than used on the sides of the building. A special feature to be noted is that the mortar joints on the facade brick are considerably thinner than the mortar joints on the sides of the building.

STATEMENT OF SIGNIFICANCE

The Old City Hall is significant because of its role in the development of the City of Lafayette. Originally constructed to house the Bank of Lafayette, it served the city in an official capacity for many years.

The Old City Hall building first opened its doors on June 21, 1898, as the Bank of Lafayette. The lot on which it was built is right across the street from the Courthouse Square, the most historic site in Lafayette. Since 1835, there have been four courthouses built on this same square and it currently accomodates the present courthouse for the Parish and City of Lafayette. This land was donated to the City in 1825 by Jean Jacques Mouton, father of Alexandre Mouton who later became Louisiana's 9th governor, and probably the most prominent figure in Lafayette's history. Around this square, Lafayette's present Central Business District is built.

The architect was an extremely interesting person and a prominent figure in the development of the Central Business District of Lafayette. His name was George Knapp and he came to Lafayette from Evansville, Indiana in 1887, married a local girl in 1892 and made this community his permanent home until his death in 1949. He also laid plans for the Masonic Temple, Old Post Office, Gordon Hotel, Convent Building, the original Jefferson Theatre and other landmarks included in the Central Business District. Knapp also built many homes here and in New Iberia which are extant today.

Knapp, a hump-backed man who personally inspected every step of the building processes for everything he planned, was later selected as the City's Building Inspector and well served this position for a number of years. These are astonishing accomplishments for a "self-taught" architect. He learned every bit of his profession through International Correspondence School courses. The actual books he studied from have been handed down to his relatives and are still available today.

When the Bank of Lafayette opened its assets totaled \$25,000 divided into 250 shares of \$100 each. Its first president, Crow Girard, was one of the persons responsible for the creation of the University of Southwestern Louisiana which presently enjoys a 10,000+ enrollment. Girard, dedicated to the future prosperity of Lafayette and the formation of an educational facility here, donated a twenty-five acre plot of land on which the University presently stands. He is still remembered, as Girard Hall and Girard Park on campus are named after him.

8.	Significance	Old City Hall	Page 3		

While the building is typical of two-story commercial structures of its era in function and basic design, the facade decoration is believed to be architecturally unique in this area. Easily recognizable, the building has long been regarded as a landmark by the townspeople. The architect's local stature is perhaps best evidenced by his years as the City Building Inspector.
