Describe the present and original (if known) physical appearance

The Anoka-Champlin Mississippi River Bridge (Mn/DOT No. 4380) is located at the river crossing of U.S. Highway 52, above the head of navigation. At this point U.S. 52 joins the cities of Anoka in Anoka County, and Champlin in Hennepin County.

According to the Minnesota Department of Transportation's <u>Structure Inventory Sheet</u>, this continuous arch bridge of steel reinforced concrete has eight main spans and two approach spans. The total length is 995.1 feet with a maximum span length of 109 feet. The deck width (out-out) is 60.5 feet with a roadway width of over 40 feet and eightfoot sidewalks along both sides.

The open spandrel construction consists of twin concrete arches for each span with supporting spandrels and simple transverse slabs with in turn support the concrete deck and road surface. The approach spans have closed spandrels. A mildly classical concrete railing with simple outlined panels runs the length of the deck. Original iron lamp posts top each pier on the railing. Vertical fluting ornaments the piers.

The bridge was remodeled in 1971, but retains complete original integrity.

Builder/Architect C.M. Babcock; Minneapolis, Bridge Company

Statement of Significance (in one paragraph)

The Anoka-Champlin Mississippi River Bridge, built by the Minneapolis Bridge Company in 1929, is significant for both historical and engineering reasons. Historically is crepresents a major river crossing, joining together two communities with long-standing commercial and economic links. Technologically it is a fine representative of the open spandrel concrete arch bridge type which reached a high state of development in the Twin Cities and surrounding area in the late 1920s.

Two prominent bridge authorities, Carl Condit and David Plowden, have recognized the significance of the Twin Cities' concrete arch bridges. As Plowden points out, "the first really sophisticated American program of concrete highway bridge construction evolved around Minnesota's Twin Cities." This happened, says Condit, because here "the Mississippi and Minnesota rivers offered the engineers numerous opportunities to try their ingenuity."²

In its current excellent condition, maintaining full integrity, the Anoka-Champlin Mississippi River Bridge exhibits the twin qualities of the Minnesota concrete arch open spandrel bridge: a graceful and pleasing aesthetics coupled with an economy of design and construction.

¹ Condit, Carl, <u>American Building</u>, page 255.

² Plowden, David, Bridges: The Spans of North America, page 299.

PLEASE NOTE: The manuscript for this nomination was prepared before the one paragraph limit for significance statements was stipulated.
