Describe the present and original (If known) physical appearance

The Friedline Apartments is a commercial Queen Anne building on the northeast corner of Fourteenth and State streets in Boise. The 150-by-50-foot flat-roofed brick block has its long dimension on State. A three-quarter round second-story turret with a tall flared conical cap and a final is outset at the corner. Two-story porches with deeply flared shaped-shingle upper walls are outset from the recessed, centered entry bays on each of the four pairs of apartments. According to a contemporary report, the pairs were separated by eight-inch fire walls "so one portion could burn, leaving the others intact."

The basement and exposed foundation of the building are of random-coursed roughcut stone; coursed rock-faced stone is used for the porch walls and porch stair parapets. The brick masonry of the walls is unelaborated except on the upper part of the upper story, where there appear in each bay recessed panels containing the further recessed form of a small Greek cross, and along the roofline where a series of outset courses form a simple corbelled cornice. Above and below the windows on both stories are lintels and sills of concrete imbedded with small The same material is used for the sill that runs between the irregular stones. The porches and the shed roofs over the balconies foundation and the upper wall. are supported by round posts, one at each corner, with saucer-shaped bases and no Wooden screens cut in the form of flattened arches span the lateral capitals. space between them, and on the sides small round-arched screens link them with the main walls. The corner turret is of narrow wood lath, vertically set; the turret has two bands of windows, one of narrow sashes set at a level with the other second-story windows and one an attic band of small, square, fixed lights. Each band has a continuous strip of wooden molding at the top and a row of wooden dentils underneath. The dentils also appear in single strips near the base of the turret and near the top, at a level with the main roof of the building and just below the flared eave of the turret cap. Sidewall windows are double-hung sash except for the larger parlor windows, which have fixed upper sections.

The building has experienced two fairly minor, or at least undistracting, exterior alterations. The brick, stone, and shingle surfaces have been painted, and screened patios and balconies have been added to the rear of the building.

Statement of Significance (in one paragraph)

The Friedline Apartments building is architecturally significant as a fine example of the multi-family dwellings built in Boise in the first decade of the century, and as the best surviving example of commercial Queen Anne architecture in the city. It is a particularly valuable survivor in its prominent location on a now most entirely commercial streetscape.

The building dates from an expansive period in Boise's history, from early in a decade during which the population of the city nearly tripled and during which the demand for housing radically increased. A significant part of this demand was met through construction of apartment structures which were in effect rowhouses. Al-though most of the surviving apartment buildings of the period have since been cut into smaller units, most were originally, like the Friedline, designed for single-family occupancy of each two-story-with-basement section. The first newspaper report on the Friedline referred to plans for a handsome "row of houses." ¹ (Later references were to "terraces.") The building did, with its downstairs parlor, dining room, and kitchen, and its upstairs bedrooms and sitting room, provide an only slightly scaled-down version of the standard Victorian floor plan for a detached dwelling. A later report specified that:

Each of the eight families will have a front door entrance, and a backyard fenced from the next door neighbor. The grounds surrounding the buildings will be laid out with cement walks and grass plots.²

The Friedline was designed in 1902 for Abraham Friedline, a dentist and proprietor of the Denver Dentist Parlors, by architect Ross Cartee. Cartee was a native of Boise and son of territorial surveyor general Lafayette Cartee. His only other attributed Boise designs are for two houses in the near North End that also display a Queen Anne-classical spirit.

It was not uncommon to appropriate the decorative conventions of the predominantly residential Queen Anne style for commercial buildings during the decade spanning the turn of the century, which was the heyday of that style in Boise. For example, also in 1902, the local firm of Tourtellotte and Company designed a Main Street business building for W. E. Pierce that included polychromatic brick and a conical corner turret. The building across from it, which survives as one of the jewels of downtown Boise, was W. S. Campbell's six-story, turreted Idanha Hotel; it qualifies as Chateau Style in the eclectic western context but clearly overlaps stylistically with local versions of Queen Anne. Tourtellotte and Company's somewhat graceless Jones Apartments, erected at Tenth and Fort in 1904, is a surviving example of the style as applied to residential rental buildings. But if other apartments were built in the style, they have gone the way of the demolished Pierce building.

The Friedline, with its densely textural and plastic surface organization and its grace of execution, remains without peer in Boise for buildings of its scale and style. It effectively establishes the Queen Anne commercial style in Boise's surviving sequence of early apartments, along with the Italianate Belgravia of about 1904, the bungaloid Wolters double-houses of 1908 and 1909, and the classical-revival White Savage and Eichelberger apartment buildings of 1910. It is all the more effective for surviving intact on a tree-lined lot on State Street, six blocks west of the capitol and on the northern edge of Boise's downtown. State Street has become a major arterial, and the early residential architecture

along it has in this area almost entirely given way to commercial conversion and strip development. The Friedline thus preserves in a highly visible way something of the style and texture of early residential Boise, in a location where those qualities have almost disappeared.
