East 14th Street Historic District: Description

The East 14th Street District consists of 67 houses in the 300-800 blocks of E. 14th Street. The District is located in the northern part of a large residential area known as LeClaire's addition, named for the many subdivisions platted here by one of Davenport's founders. Parts of the Addition were developed as early as the 1850's (Antoine LeClaire himself lived about seven blocks south of E. 14th Street), with the entire area built up by the turn of the century.

The E. 14th Street District is one of two (the other being Cork Hill) located in the LeClaire Addition. Developed slightly later than areas south and east, the District's houses date from the period c. 1870-1910, with most being from the late 1880's to just after 1900. In this respect, the District is not unlike many other portions of the LeClaire Addition, but it is distinguished from its surroundings by the relatively high degree of integrity shown in its resources.

The houses of the District are fairly large (2, 2-1/2 stories) and all but one are of wood frame construction. They are set back 20-30 feet from the street on long, narrow lots, many of which are slightly elevated and terraced. Most are (or were originally) single-family dwellings, but there are also several double houses from the late 19th century, easily recognizable by their exact symmetry, even to identical porches on each side. The only house that might be remotely considered "intrusive" is 1330 Farnam, a one-story ranch house whose scale and form are different from other houses in the district; it might better be described as "neutral". Within the district, twelve houses have been rated as A structures, based upon their integrity, quality of form and detail, and ability to illustrate aspects of the District's -- and the city's architectural history.

#### East 14th Street Historic District: Significance

The East 14th Street District presents an excellent illustration of trends in middle-class "mass vernacular" housing in Davenport during the late 19th and early 20th centuries. During this period, popular tastes turned gradually from the lively surface textures, verticality and asymmetry characteristic of the Victorian era to more regular, symmetrical forms of the turn-of-the-century Colonial (particularly Georgian) Revival. Both extremes are represented in the District, but some of the more interesting houses are those that illustrate the transition between the two styles. The District also includes several examples of that enduring Davenport house form: the two-story, 3-bay front gable with entrance to right or left of center and an attic window symmetrically placed in the gable end.

During the 19th century, the East 14th Street District ran through the heart of the non-German residential area. Harrison Street was the traditional boundary between Germans and non-Germans, and East 14th Street lay well within the latter group's neighborhood. Prominent entrepreneurs, industrialists and professionals resided in the District's large houses. Unlike the German area west of Harrison Street, the East 14th Street families seemed to remain for several decades rather than a lifetime. Continuation sheet East 14th Street

The earliest real style to be found in the District is the Italianate (14-E704, 14-E308), whose rectangular form, hipped roof and wide eaves would be repeated, with more emphasis on symmetry and the horizontal, in the early 20th century neo-Georgian "hipped box" (14-E513, PS-1326, PS-1316). Contrasting with the relative regularity of the Italianate was the post-Civil War vernacular Queen Anne style, with its irregular plan, variegated roofscape, towers, projecting bays and dormers, and variety of surface textures (14-E224). One of the most prevalent popular adaptations of the Queen Anne style was the "pinwheel" house (14-E707, 14-E619, 14-E719, 14-E818, 14-E633). It was essentially a two story cube with pointed hipped roof and full-height pavilions, always gable-roofed, projecting at the front and usually one or both sides. Surface treatment usually meant narrow clapboard walls and decorative gable-end shingling. Most had full-length verandas, with turned posts and brackets in the Eastlake style, or neoclassical columns and pediments.

Item number

8G

The free adaptation and mixing of surface elements borrowed from "high style" design extended in E. 14th Street to highly traditional house forms as well. The two-story, gable-roofed L-plan "farmhouse" (14-E607) could be considerably enlivened by decorative porches, projecting window bays or a corner tower (FA-1408). Likewise the two-story, three-bay house with broad front gable -- a vernacular form of Greek Revival that was built in Davenport for nearly 20 years. Many of these had a projecting window bay on at least one side (14-E824), and decoration often limited to treatment of door and window surrounds (14-E825, 14-E427, 14-E810, 14-E503). At least one of these (14-E640) was built in 1875 by T. W. McClelland, Davenport's most prolific 19th century contractor/builder, whose extensive (though not exclusive) use of this house type made it a still-notable phenomenon in the city's architectural landscape.

The turn-of-the-century Colonial Revival took many forms in Davenport, most popularly -and simply -- in the substitution of columns for Victorian-era brackets and posts. Not only were houses built with these "new" features, but older houses modernized thereby, particularly through construction of an appropriately neo-classical veranda or porch (14-E704, 14-E713, 14-E640, 14-E421). Gradually, however, the forms of houses changed as well, toward the regularity and symmetry of the Georgian Revival, in combination with the lower rooflines and wide eaves influenced by Wright's Prairie style and Gustav Stickley's Craftsman cottages (PS-1316, 14-E507). Since much of the E. 14th Street District was built before and in the early years of this transition, houses formally expressing Georgian Colonial influences are few: 14-E604 is the clearest example. More interesting, in terms of charting the transition, is 14-E703, with its Palladian window and "correct" superimposition of the Ionic above the Doric order. The house's innate formal symmetry is thrown off-balance by the three-story, conical-roofed corner tower -- a picturesque holdover from the Victorian.

In sum, the houses of the E. 14th Street District are highly representative of their time, place and class -- solid, reasonably prosperous and unostentatious, following changing architectural styles but at a discreet distance. Inspired by a combination of tradition, patternbooks and the lure of the new, these houses vividly illustrate both stylistic trends of their time and the process by which they were adapted into the popular idiom.

SITE & RELATED STR.			-
STATEMENT			т С

This is one of the few houses with asymmetrical front gables recorded in the survey, and the only one of its type in the E. 14th Street District. It was probably derived (or modeled on) Queen Anne cottages featured in patternbooks (see W. T. Comstock's Modern Architectural Designs and Details (1881), plate 17). Although the porch was modified early in the 20th century, the house overall is quite intact, to the retention of gable-end shingling and the fan-shaped brackets of the cut corner on the west side.
