## United States Department of the Interior National Park Service

## National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

,	walls	N/A	
	roof	N/A	
	other	N/A	

Describe present and historic physical appearance.

Located 10.8 miles northeast of Bassett, the Carns State Aid Bridge spans the Niobrara River in a rural setting that has changed little since the structure's period of significance. The bridge underwent extensive alteration in 1963 with the addition of two salvaged trusses and the removal of one of the original concrete arch spans. Despite this, the remaining part of the concrete arch bridge remains essentially unaltered as it continues to carry vehicular traffic. A description of the structure follows:

span number: 5; 2 construction date: 1912-13 (concrete arches); 1963 (trusses moved)

span length: 54.0'; 175.0' construction cost: \$23,045.00

total length: 527.0' current condition: good

roadway wdt.: 14.0' alterations: trusses added and one concrete arch span removed

superstructure: reinforced concrete filled spandrel arch; steel, pinned Parker and Pratt through trusses

substructure: concrete abutments and piers with iron-edge cutwaters; steel pile bents

floor/decking: concrete deck over earth fill (arches); timber deck over steel stringers (trusses)

other features: arches: plain spandrels with slight corbel at roadway; concrete pillar and beam guardrails;

flared concrete cutwaters with iron edges

trusses: upper chord: 2 channels with cover plates and lacing; lower chord: 2 punched rectangular eyebars; vertical: 2 channels with lacing; diagonal: 2 punched rectangular eyebars; 1 round eyebar with turnbuckle; lateral bracing: round bar with threaded ends; strut: 4 angles with lacing, 2 angles, braced (Pratt); floor beam: I-beam field bolted to vertical; guardrail: gas pipe, concrete post and rail (arch).

## 8. Statement of Significance

Certifying official has considered the significance of this property in relation to other properties:

Architect/Builder (Designer) Nebraska State Engineer

(Builder) Lincoln Construction Company, Lincoln NE

State significance of property, and justify criteria, criteria considerations and areas of significance noted above.

In the early 1900s, the commissioners of Rock, Keya Paha and Brown Counties met frequently to discuss the status of Niobrara River bridges that linked their counties. Among those often discussed was the structure near the small crossroads settlement of Carns. After frequent repairs, the Carns Bridge was finally wrecked by ice in the winter of 1910. That April the Brown and Keya Paha boards resolved unanimously that "the best and lasting benefits to the people of both counties would be the building and erection of a new steel bridge." The old bridge, meanwhile, was condemned and closed to traffic. Subsequently, in July 1911, plans for two 160-foot steel spans, presented by the Western Bridge and Construction Company, were approved by the State Engineer and adopted for the crossing. But at the August 28th bid opening, all bids were rejected, because, as reported by the State Engineer, "it was evident there had been no competition in the bidding." The project was stalled until the following May, when the Lincoln Construction Company was awarded a contract to build both the Carns and McCulley State Aid Bridges. (The McCulley Bridge - removed in the early 1980s - carried State Highway 7 across the Niobrara.) Plans for the steel trusses at Carns were abandoned in favor of a concrete structure composed of six 54-foot spans. Both bridges were completed in the summer of 1913; total cost of the Carns Bridge, \$23,045.00. But the structure ultimately proved too narrow for the broad Niobrara River, and in 1962 one of the bridge's six spans, along with several hundred feet of south approach, washed out. This span was replaced, and the bridge extended, by the addition of two steel through trusses, including a Parker truss obtained from the Schuyler State Aid Bridge over the Platte River between Colfax and Butler counties.

This latter construction substantially altered the appearance of the bridge. Nevertheless, the Carns State Aid Bridge is technologically significant as the oldest remaining structure built under the state aid bridge program in Nebraska and as an excellent, early example of concrete arch construction in the state. For these reasons, Criteria Consideration B has been applied. Significant under Criterion C, the trusses added in 1963, in their present configuration with the concrete arch, still retain the essential technological features that make them a good representative example of their type, period and method of construction.

For further contextual information regarding bridge building in Nebraska, registration requirements, and property types, see related multiple property listing "Highway Bridges in Nebraska, 1870 - 1942."

10. Geographicai Data
Acreage of Property Cadastral Reference USGS Quadrangle UTM References  less than one acre S24, T32N, R19W Carns (7.5 Minute Series, 1949) zone 14 easting 460620 northing 4731120  See continuation sheet
Verbal Boundary Description
The nominated property is a rectangular shaped parcel measuring 527 feet by 16 feet, which is centered on the UTM point listed above. Included within this rectangular parcel are the bridge's superstructure, substructure, floor system, and approach spans.
See continuation sheet

**Boundary Justification** 

The nominated structure includes the bridge's superstructure, substructure, floor system, any approach spans and the property on which they rest. These boundaries encompass, but do not exceed, all of the property that has been historically associated with this bridge.
