Describe the present and original (if known) physical appearance

The Astoria Wharf & Warehouse Company Building is a 50-foot wide by 105-foot long, two floor plus basement, rectangular, masonry warehouse building constructed in 1892 on the Columbia River, in Astoria, Oregon. The stone foundations and basement walls rest below the water line. The first floor is structurally designed to support 3,000 tons (1,200 pounds per square foot).

The property is located on a 75' x 135' lot adjacent to a warehouse building to the east, and pilings from destroyed buildings once owned by the Company on the west. A section of the Burlington Northern Railroad is directly to the south.

The general interior construction consists of heavy old-growth Douglas fir timber posts, girders, beams and floor decking. The 50-foot width is divided into three structural bays of 16'9" each, and the 105-foot length is divided into six bays of 17'6" each. The floor joists are supported at the exterior walls on steel railroad rails that are embedded into the brick walls.

The foundation materials vary from basalt stone block footings to basalt and granite foundation and basement walls of approximately 36" thick. The walls above the stone foundation are brick laid in common bond, 18" thick from first to second floor, and 12" thick from second floor to the top of the roof parapet. The window openings are arched brick at the heads with granite sills. The central entry doorway has a granite keystone over the opening, and a granite sill. The exterior brick surfaces were cemented over for weatherproofing.

The facade of the main entry has a tin cornice forming an overhang over the doors and windows. The exterior wood framed windows are covered with heavy steel security shutters, the exterior wood sliding doors are covered with heavy sheet metal. The original roof is tin and has been covered with numerous layers of asphalt rolled roofing.

All exterior materials, including doors and window, are original. All interior materials are original except several temporary partitions which were added, and a small balcony that was added between the first and second floors at the northeast corner of the building. These additions can easily be removed to restore the entire interior to the original condition.

The site was deeded by the United States Government on July 17, 1868, and by the State of Oregon on September 21, 1876. (State Record Book H, p. 323, recorded September 29, 1876). All legal recordings of this site and building, 1868 to present, are on file. These recordings show the ups and downs of the salmon canning industry on the Columbia River of which this building was a major part.

Statement of Significance (in one paragraph)

The Astoria Wharf and Warehouse Company Building is significant to Astoria and to the state as the only stone and brick pre-1900 warehouse building sited on any waterfront property in the state. Additionally, it is the only surviving masonry building in Astoria whose foundations are below the Columbia River waterline. Also importantly associated with the salmon canning industry in Astoria, we feel that the building meets eligibility criteria "a" and "c."

Although salmon packing had begun as early as 1829 in Oregon, the first canning of the fish did not occur until 1866 at Eagle Cliff in the Columbia's north bank. The first cannery on the south bank was located at Westport and was constructed in 1869. Further expansion increased until there were 13 by 1874, including ones in Astoria. Full scale commercial production of salmon flourished in the late 1880s and 1890s, the period of the Astoria Wharf and Warehouse Company's significance.

The Astoria Wharf and Warehouse Company started the construction of this warehouse building on the Columbia River in the spring of 1892 and occupied it in late December, 1892, during the peak of the salmon production years. Its primary purpose was the storage of tin plate and accessories used for the manufacture of tin cans to serve the early salmon canning industry of the area. This building served an adjacent can manufacturing and can storage complex that provided tin cans for the then thriving salmon industry. Seven different can companies occupied the building during the 1892-1949 period. Since it was constructed, it has survived three major fires that destroyed most surrounding buildings. Due to its heavy timber and masonry construction, it was commonly known as the "Bonded Warehouse." Its thick masonry exterior walls, its heavy metal covered wall openings and the fact that the building is the only building on the Astoria waterfront that has foundations and basement walls resting below the Columbia River waterline, explains its fire resistive durability. It is also significant, as reported on December 14, 1892, in the Daily Morning Astorian newspaper, that the brick in the exterior walls were the first locally fired brick and were produced by May & Thair in their kilns on the Lewis & Clark River, Clatsop County, Oregon, and that three blue bricks from China were placed above the granite keystone of the arch over the central doorway and a sample of brick from San Francisco, \$45 per thousand, was placed in the building to compare with the local brick quality. The granite keystone over the central doorway was quarried at the Chinook Quarry in this area and was relocated from the old Custom House in east Astoria, which was built in 1852, and was the first Federal building built west of the Rocky Mountains. It can be assumed that the granite door and window sills came from the same Custom House, as it was dismantled or demolished. The granite in the basement walls resemble "Rainbow Granite" currently quarried in Morton, Minnesota by the Cold Springs Granite Company, or it could be granite ballast disposed of by early sailing ships from foreign, or other ports. Only this masonry warehouse building survives to illustrate this early tin-can industry on the lower Columbia River.
