National Register of Historic Places
Registration Form

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in Guidelines for Completing National Register Forms (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

1. Name of Property
   historic name Blue Mounds State Park WPA/Rustic Style Historic Resources
   other names/site number Blue Mounds State Park

2. Location
   street & number off U.S. Highway 75
   city, town Mound Twp. Luverne
   state Minnesota code MN county Rock code 133 zip code 56156

3. Classification
   Ownership of Property
   ✔ private

DESCRIPTION  

Blue Mounds State Park WPA/Rustic Style Historic Resources consist of an historic district which includes four structures and one building constructed along Mound Creek. One non-contributing building is also included. Development in the park centers on two dams which create two lakes. Between the lakes Mound Creek tumbles over a rocky gorge composed of brightly colored Sioux quartzite which is same stone utilized in the construction of the park structures. Architects include the National Park Service and the Division of Drainage and Waters of the Minnesota Department of Conservation.

Department of Natural Resources building identification numbers are placed after the name of the building.

Blue Mounds State Park Historic District  

1. Structure: Upper Dam  
Builder: WPA  
Architect: Division of Drainage & Waters  
Date: 1938  

The Upper Dam consists of a 61' spillway and a 65' dike constructed with native stone which blends with the existing quartzite along Mound Creek. A stone abutment is constructed on the west side of the spillway and extends 200' in the form of a riprapped dike with a 50' stone core wall. An 18" sluice gate is placed at the base of the spillway.

The dam was constructed through the cooperative efforts of the Works Progress Administration, the Emergency Relief Administration, and the Minnesota Department of Conservation.

2. Structure: Upper Mound Lake  
Builder: WPA  
Architect: Division of Drainage & Waters  
Date: 1938  

Upper Mound Lake is created by the Upper Dam. The lake is roughly 2,250 feet long and averages 250 feet wide.
3. Building: Latrine 4-77  
   Architect: O. Newstrom  
   Builder: WPA  
   Date: 1939-42

The Latrine is a 32' x 18' gable roofed structure which follows a standard design used in many state parks. However, the building is one of the most striking visually in the state park system because of the bright rose colored quartzite used in its construction. Stone walls, 5'9" x 9'6", extend from the sidewalls to form entrance screens. Each screen is 5' high. Paired six light casements are placed on both principal facades and are separated by rough clapboard siding. Three 6" x 8" lookouts project from each gable and four 6" x 10" openings pierce the sidewalls to provide ventilation. The building still retains its original plank entrance doors. The interior was remodeled in 1964 and skylights were added. Although construction was begun in 1939, the Latrine was not completed until 1942 due to difficulty in obtaining WPA funding.

4. Structure: Lower Dam  
   Architect: Division of Drainage & Waters  
   Builder: WPA  
   Date: 1938

The Lower Dam creates a second artificial lake located in the park and is located just east of the swimming beach. The dam is 107'6" long and 28' wide and consists of a massive structure constructed of native stone and concrete. The structure is flanked by a 300' riprapped dike on the south side and a 500' dike to the north. A 500' emergency spillway is located next to the northern dike and leads to the river bed just below the dam. In 1972 the riprapping was repaired and the flashboard slots were adjusted. Reconstructive work was completed on the piers, walkways and railings. The dam was built through the cooperative efforts of the Works Progress Administration, the Emergency Relief Administration and the Minnesota Department of Conservation.

5. Structure: Lower Mound Lake  
   Architect: Division of Drainage & Waters  
   Builder: WPA  
   Date: 1938

The Lower Mound Lake is created by the Lower Dam. The Lake is 2,000' long and averages 500' wide.
The Picnic Shelter is a 42' x 22' structure covered with a gable roof supported by eight stone columns. The building is noncontributing
8. Statement of Significance

Certifying official has considered the significance of this property in relation to other properties:

STATEMENT OF SIGNIFICANCE

Blue Mounds State Park WPA/Rustic Style Historic Resources are historically significant for their association with the social, political, and economic impact of the Great Depression and the subsequent development of the various Federal Relief Programs such as the Works Progress Administration which was responsible for their construction. Blue Mounds State Park is also historically significant as an important link in the state park system which provided recreational facilities to the extreme southwestern corner of Minnesota.

Blue Mounds State Park Historic Resources are architecturally significant as outstanding examples of rustic style construction built with a remarkably bright rose quartzite. Of exceptional significance are the park's two dams which incorporate rustic style features in their construction. The Upper Dam in particular is an extremely successful example of rustic design applied to a park structure. The dam consists of a stepped spillway built with native stone which blends and merges with the rocky ledges of the natural landscape. (Refer to the Statement of Exceptional Significance on page F34 of the Multiple Property Documentation Form.)

Blue Mounds State Park was originally called Mound Springs Recreational Reserve when the park was established in 1937. The name was changed to Blue Mounds, which is the term for a nearby outcropping of red Sioux quartzite which forms a cliff about one mile long and up to 100 feet high. The cliff, with the sun setting behind it, appeared blue to settlers going west in the 1860s and 1870s. They named the prominent landmark Blue Mounds.

Verbal Boundary Description

The boundary for Blue Mounds State Park WPA/Rustic Style Historic Resources is shown as the heavy line on the accompanying map entitled "Blue Mounds State Park." It is defined by Mound Creek and Lower Mound Lake to the north, Lower Mound Dam to the east, the inside edge of the park road to the south, and Upper Mound Lake to the west. The boundary line is crosshatched.

Boundary Justification

The boundary includes the buildings and structures that have been historically associated with the property and that maintain historic integrity. The boundary defines the areas of the park developed by the WPA.
