DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Georgetown-Silver Plume Historic Mining District possesses remarkable integrity and the historic structures in the two towns are reminescent of a bygone era. Georgetown, in particular, is unique among Colorado's mining towns. Because the wealth of the mining district was centered here, Georgetown took on a wealthy aura and the buildings show this wealth. It was here that miners brought their families and tried to reproduce the classic architecture and culture that they left in the east. The Victorian atmosphere they created still remains. Maple and oak trees which these early pioneers planted, line Georgetown streets after more than a century has passed (Photo #19).

Silver Plume, on the other hand, was the work center. Here the majority of mines were located. Homes in Silver Plume are far less impressive as those of the Georgetown. Though the ore was removed from Silver Plume, so was the wealth. This working relationship between the two towns has been cause for much resentment--both past and present.

GEORGETOWN INVENTORY

There are a great number of historic structures which remain in Georgetown. A number of these properties are being inventoried by the Georgetown Society, Inc., under the auspicies of the Colorado Historical Society. Some of the now outstanding structures include:

1. The William A. Hammil House and Offices (Photos #1 and #2) is a two and one-half story clapboard structure on a stone foundation. There is a steep gabled, wood shingle roof which is dotted intermittenly with dormers and brick chimneys. The house has front concrete windows and is divided by simple wood tracery into twin arches. The house is in Early Gothic Revival style. Improvements to the house include construction of the center and back wings, the glass solarium, and the addition of matching sets of oriel and bay windows on the north and south facades.

To the rear of the house are the office buildings. The South Building is fashioned of stone blocks in Flemish bond. The building, two-stories high, has a hipped roof with deck and iron railings. The entrance is on the extreme end of the building. Above the windows and door are both flat and semi-elepical arches.

Adjacent to the north is the garage. Fashioned of stone, the garage likewise has a hipped roof with dormers. There is a cupola square in plan. One and one-half stories high, the garage also has work space on its south side.

2. The Maxwell House (Photo #3) Fourth Street is probably the most famous of Georgetown houses. Built by a local grocer, the original house was much simpler. Additions were made to the original house. The resulting house is a prime example of high Victorian architecture. It is two and one-half stories high with mansard roof and a third story cupola. Fashioned of clapboard the house has boxed windows two over tow double hung sash. There are

STATEMENT OF SIGNIFICANCE

The Georgetown Loop area, consisting of Georgetown, Silver Plume, and the Alpine valley between the two communities, is perhaps the most scenic and historic of all the Colorado mining districts, and certainly the one that best preserves the flavor of a bygone era. The area grew and flourished first as a gold and silver producing region and later as recreational center for the people of Denver.

Gold was discovered along Clear Creek in 1859 by George and David Griffith, two Kentucky farmers who had joined the gold rush to Denver the previous year. By the spring of 1860, thousands of other prospectors had moved into the valley in search of the precious metal, but they met with little success. The population had begun to decline when a rich lode of silver was discovered near Georgetown in 1864. Within a few months the valley was again alive with prospectors, and Georgetown was once more a thriving community. Satellite villages such as Silver Plume were soon established near the mining operations, but Georgetown continued to grow and at one point in its history was second only to Denver in population.

In 1877 the Colorado Central Railroad reached Georgetown from Denver and seven years later the service was extended to Silver Plume over a very scenic aerial route. The railroad was built to haul silver ore, but it soon became a tourist attraction for weekend excursions in the Central Rockies. The railroad continued to serve the area in this capacity long after mining operations were abandoned in the valley.

Georgetown and Silver Plume are still active communities today. Through the efforts of the local people in cooperation with the Colorado Historical Society the Georgetown Loop area has retained much of its charm of former years. Many of the buildings have been preserved and others are being restored to their original appearance. Plans are also being made to reconstruct the famous Georgetown Loop Railroad that once served the valley.

ornate cornices on the windows and the porth has an oval pediment with deck.

- 3. Luedde House (Photo #4) Third and Rose is a house of modest proportions but extremely good Victorian style. A brick structure two-stories high it is topped with deck and wooden rails. There are harp on the north aced south side of the house. There is a small porch with square wooden columns which support a small deck. Windows are double hung two over two and have semieleptical stone.
- Spencer House (Photo #5) Fourth and Argentina is a two-story house the second level is mansard. Fashioned of brick, painted green, the house is ornate with triangular pediments on the windows dormers of the second level with oval treatment on the first floor. There is a deck on the porch which has wooden rails. The porch has an oval roof.
- Bowman-White (Photo #6) Ninth and Rose recently acquired by the Georgetown Society and presently under restoration is a two-story clapboard building with wood shingles. There is a bay on the south side of the house and window treatments, when compaired with other Georgetown structures, are modest. There is a porch with a deck. Entrances lead into a small foyer.
- 6. Public School (Photo #7) Taos Street is a massive two-story structure built in 1874. The school designed with central pavilion with wings. building is no longer used and plans are in progress for acquisition and restoration.
- The Hotel de Paris (Photo #8) Sixth Street, was built in 1875 by an eccentric Frenchman named Louis Depuy (actually Adolphus F. Gebard), is one of the most interesting historic buildings in Colorado. It is maintained in its original condition. It still retains some suggestions of its former glory. From 1875 to 1900 this hotel was known throughout the west for French culture, French wine, and food delicacies and a sort of eratic highhanded European hospitality. People traveled many miles to enjoy its luxuries. The square, two-story building, stuccoed to resemble stone, the effigy of Justice with her scales swinging in the breeze, metal lion and stag which stood on its walls, the Fountain Cafe, the dozen massive living rooms richly furnished in walnut, the hundreds of books, engravings, and prints of classical subjects which lined the walls, made it known throughout the West.

CONTINUATION SHEET ITEM NUMBER 7 PAGE 3

- 8. The Clear Creek County Courthouse (Photo #9) Argentine Street is composed of two buildings. Fire destroyed the second story and it was replaced with wood. The courthouse is a simple two-story brick structure. This building holds all county offices.
- 9. The Old Jail (Photo #10) sits behind the courthouse. A small one-story building built in a square of rubber stone, the old jail still has bars on its windows, though it is no longer used. This is one of the oldest buildings of the community.
- 10. Grace Episcopal Church (Photo #11) was erected in 1869. It is the oldest Episcopal Church in Colorado. A simple wooden structure, the Church has no spire but is topped with a cross. It has a steep gabled roof made of wooden shingles. Entrance is made by double doors which lead into a small foyer. The windows are not stained.

Silver Plume has been bisected by Interstate 70 into north and south sections. The south side, called Brooklyn, is composed of residences of relatively recent construction. On the north side of the highway are a number of institutional buildings as well as the business district. The town when compared with larger mining communities is rather compact. However, because in many cases these old buildings are unaltered, their value is heightened. Silver Plume with its stepped gabled and flat top roofs is unique for its western simplicity.

- 11. The Old Silver Plume School House or Pioneer Building (Photo #12) is by far the most impressive structure in Silver Plume and was for many years the largest school in Clear Creek County. Designed by William Quayle, the school is a two-story building in the Romanesque style. The school is presently the only brick building in Silver Plume which dates before the turn of the century. The building was discontinued in 1959 as a school and for two years was unoccupied. The local Historical and Cultural Society has acquired the building and uses it as a museum.
- 12. The Windsor Hotel (Photo #13) built during the late 19th century was the major hotel of Silver Plume. Owned by Dave Collins, Silver Plume's oldest citizen, the building has been altered from its original. It is a two and one-half story clapboard building with hipped roof. There are

gabled dormers. A porch with deck runs across the front. A wall in the front parlor has been removed and a large picture window placed here.

- 13. Silver Plume Church (Photo #14) the oldest church in Silver Plume it is a small wooden building which has been covered with a asphalt siding material. It has a steep gabled roof and was erected uring the 1880's. Without spire or steeple, the church is topped with a small cross.
- 14. The Old Jail (Photo #15) built in 1875 was typically functional. Built against a mountain, the jail is a simple one-story building with a gabled roof. Built of stone, the jail has no windows. A sign above the door relates the story of Jack McDonald, owner of the 7:30 mine who was the chief occupant of the jail.
- 15. The Silver Plume Hose Co. (Photo #16) was built in 1886. This wooden building housed the fire department. The building has a false front and steep gable.
- 16. The Georgetown Loop Railroad (Photo #17) was the railroad constructed to bring the ore from Silver Plume up to Georgetown. This historic railroad is being reconstructed to run as a tourist attraction during the summer months by the Colorado Historical Society.

HISTORY

Georgetown, next to Leadville, was the most important silver camp in Colorado. Prior to the Leadville strike of 1878, it was the most important mining producing town. The county of Clear Creek, of which Georgetown is the seat, produced more than 90 million dollars in gold, silver, copper, lead, and zinc, up to 1939.

Georgetown's first great boom was the result of the discovery of gold there by George and David Griffith in 1859. These 2 Kentucky farmers who joined the gold rush to Denver in 1858, spent the winter in that frontier town. When they heard of Gregory's discovery in 1859, near present Central City, the 2 Griffiths hastened to the diggings in that vicinity and found that all the good claims had been staked out. They then drifted into the vicinity of present Georgetown which had not yet been penetrated. George Griffith staked a claim and found a lode of gold which proved promising. Here he staked a claim and returned to Gregory diggings to tell his brother David about his discovery. The 2 men and 3 others returned immediately and worked all summer, taking about \$500 in gold from the rock crevice which had been discovered. By agreement, the 5 miners called their camp "George's Town" which they reluctantly left during the winter months.

In the spring of 1860 the brothers were back again with another brother and his wife and with their father. George's Town attracted others until the valley was alive with miners, who in June, 1860, called a meeting and drew up the laws of the Griffith mining district. Prospectors scattered over the hillside and searched for gold. However, they found but very little. Other mines came into the Griffith district and met with similar disappointment.

In 1864 a miner found a rich lode of silver which assayed 1,000 ounces of silver to the ton. Soon after news of this discovery reached the outside world, in less than a month there were 2,000 men searching for this metal. By the fall of 1864, Georgetown was a thriving community. By 1866, there were 2 camps half a mile apart separated by a beaver dam. camp, Georgetown, and the other held a public meeting. At this meeting both camps agreed to combine under the name of Georgetown. As a result of a special election in 1868, the county seat was moved from Idaho Springs to Georgetown.

Georgetown was the center of the silver craze of 1867. By the end of the year it was a booming community. With the collapse of the price of silver in the 1890's, Georgetown began its second decline. It was kept alive by a few prospectors, some gold miners, and many tourists. In 1940, the town had a population of 303; in 1950, 329.

Georgetown is much unlike the other mining towns in Colorado. It was a city to which the miners brought their families and where they tried to reproduce as closely as possible the culture and architecture to which they were accustomed in the New England and Midwest sections. Here the Victorian atmosphere still prevails. There are trees along the streets which were planted years ago by the citizens who took great pride in their homes.

Georgetown-Silver Plume Historic District

CONTINUATION SHEET ITEM NUMBER 10 PAGE 1

From the point of intersection of the 11,200 foot contour line and the bed of Brown Gulch, as indicated on the accompanying USGS Georgetown Ouadrangle 7.5! series map dated 1957, proceed due south to the point of intersection with the boundary line of the Arapaho National Forest: thence proceed due east along this boundary a distance of two miles to a point of intersection with the west section line of section 20, T.4 S.R74W; thence proceed in a straight line northeast, eliminating the Georgetown Reservoir, to the southwest corner of section 16 of said township and range, thence, again following the Forest Boundary, proceed due north a distance of approximately 2-1/2 miles to the intersection of the east line of section 5 of same township and range and the 8560' contour; thence proceed due west to a point of intersection with the Arapaho National Forest Boundary on Columbia Mountain; thence proceed due south along this boundary to a point of intersection with the northeast corner of section 18 of said township and range; thence west along the north section line of section 18 to an intersection with the 11,200' contour; thence south and generally west along this contour to the point of origin.

The boundary encompasses both towns of Georgetown and Silver Plume as well as the railroad grade connecting the two communities. The boundary at the western section is set to encompass the bulk of the mining excavations that established the Silver Plume area as the focus of mining activity. At the north, the boundary was set to provide an adequate vista along the valley to a point where that vista terminates as the valley bends eastward. The boundary was set to provide a sufficient historic and natural setting lateral to the course of the valley.
