ESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

Present Condition:

The interior needs considerable renovation in order to allow it to be used as an additional Charleston County Office Building, without altering the original design of the rooms or the interiors.

The following description was written by Mr. Albert Simons, FAIA, for his forthcoming <u>Charleston Guide Book</u> in preparation for the Charleston Convention of the Society of Architectural Historians:

the word "tenement" today has a rather pejorative connotation which did not exist in the 18th century. In the language of today it could best be described as a duplex dwelling. The building covers the entire width of the lot with a barrel vaulted passage at ground level extending down the center of the building from the street to the yard at the rear. This passage, neither wide nor high enough for the passage of a horse drawn vehicle, was intended for pedestrians only.

At Blake's Tenements there are, on both sides of the passage, service entrances to the basements of each dwelling as well as windows for ventilation. The two south rooms in the basement probably served as kitchens; each has a large open fireplace. The south windows of both kitchens which show on the inside were walled up when the perfon ascending from the street to the floor above was constructed. This double exterior stairway must have been built before the Revolution because the treads and the platforms are paved with an English stone known as "nautiloid." Also the character of the iron railing with the ornamental scroll work in the center would not be very much later than the house.

On the south front of the building, the brickwork is laid in Flemish bond; the sides and rear are laid in English bond. On the east side the brickwork is less perfect because of the former presence of an earlier brick building two stories and a garret high which precluded the neat pointing of the brick.

Because of the obstruction of this older building, there are fewer windows on the lower stories of the east dwelling than on the west side of the west dwelling. The west dwelling must have been considered more desirable, and received a somewhat more elegant interior finish.

On the exterior, the window frames are set flush with the face of the brick work and are spanned by segmental relieving arches of row lock bricks with the spandrels between the frame and arch chocked with a stretcher in the middle and bats on the ends.

Originally the window sash in the basement consisted of six lights over six lights; on the first and second floors nine lights over nine lights; and on the third floor six lights over six lights, with wide strong muntins. But even such sturdy glazing bars could not withstand the wind pressures of the periodic tropical storms. All sash on the east and south sides have been replaced by sash with more slender muntins and on the first and second floors with six over six panes of glass,

has spacious dimensions and is distinguished for the beautifully executed woodwork in principal rooms and for its notable wrought iron steps and porch railings.

Located on historic Court House Square, the building helps complete the character of the entire area, and it takes on added significance as the western boundary of a proposed courthouse park.

Enclosed as supplementary information are a neighborhood site plan, elevations for the gates and fences and a landscape plan for the park.

Blake Tenements 7. Description

departing from the uniform size of panes still surviving on the west and north sides of the building.

The floor plans of the two dwellings mirror each other and repeat on all three floors, consisting of a large south room, then a stair hall the full width of the building and then a north room not quite as deep as the front room. The framed kitchenettes at the corners of the north side are later accretions and will be removed. In the northwest room on the first floor a partition has been added parallel to the east wall giving a passage to the rear entrance from the west stair hall. The proper mouldings have been replaced on the room side of the partition so that the room has not been disfigured. The south rooms in both dwellings and on the first and second floors have wood wainscots with moulded chair rails and walls above paneled. These panels are not the customary beveled kind but have flat fields within the stiles and rails with a small double bead mould replacing the inner edges of the bevel. Above the paneling is a full wood cornice. rooms on the second floor are the drawing room and are given greater elaboration of detail; the mantel piece in the east side is enriched by brackets with hand carved foliation. In the west drawing room the original mantel piece has been succeeded by a large and ornate replacement in the Adam style popular early in the 19th-century in Charleston. In the reception room, the replacement is smaller and less florid but in the same character.

Throughout this building, the original flooring of wide random width boards has remained in place. Most of the "iron mongery" of H and L hinges and box locks are still on the doors and the building has suffered comparatively few changes over the years."

The building is empty at present subject to renovation as part of proposed Court House Park. If money cannot be obtained for the proposed and necessary renovation, the Tenements will probably have to be demolished.
